

## Cross Border Field Support and Service

Roll-out of projects often runs across borders. Global account management with one point of contact, and a globally standardized product and service offering ensures successful global implementation.

### Services for Uptime, Performance, Compliance & Expertise

When measurements are directly linked to profit, downtime is expensive. With a global service network, we can serve you with on-site support and technical assistance, any time and anywhere. Our service team knows how to satisfy your business needs by getting the best from your dimensioning, weighing and scanning equipment. Take advantage of the experience, skills and thorough know-how of our far-reaching team and maximize your return on investment.

**Over  
5000**  
Factory Trained  
Service and Sales  
Specialists  
Worldwide

Transport and logistics is global by nature. METTLER TOLEDO has sales and service organizations in 35 countries as well as distribution and service partners in most others. Our solutions are developed and produced in the United States, Europe and China.

## Knowledge and Tools For an Informed Investment

Explore our selection of educational tools that provide information on how to optimize transport and logistics processes, the technology and solutions available today and what to consider when investing in dimensioning, weighing and identification equipment.

### Process Consultation

Benefit from our years of experience to make the most out of your investment. We will consult with you before, during and after investment to ensure right selection of equipment that performs optimally to meet your business goals and provide maximum return on investment.

### Project Management

In a global industry, where uptime is key, ensure smooth implementation with expert project management. Experienced project specialists and service technicians carefully plan and manage project roll-out for on-time installation and adherence to specification.

### Flexible Solutions

Because every operation is different, choose from flexible solutions that are designed for future investment. Customized host communication, a variety of mounting options and modular application software give you a system tailored to your individual operational needs.

### Installation & Testing

Local installation teams made up of system specialists and support technicians work systematically to have your equipment up-and-running as quickly as possible. Performance is tested and documented according to specified standards.

### Interfacing & Communication

Modular software merges data from different data capture devices and offers seamless communication with sorters and data management systems. A wide array of connectivity options make for easy integration into existing processes. Data storage and transfer is secure and legal-for-trade.

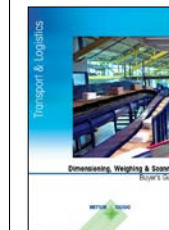

### Service and Spare Parts

Roll-out of dimensioning, weighing and identification projects often runs across borders. Global account management with one point of contact, and a globally standardized product and service offering makes for well organized, successful global implementation.

#### DWS Buyer's Guide

Our dimensioning, weighing & scanning guide offers advice to both experienced and first-time buyers of DWS equipment.
