

## Services for the InPro 8300 RAMS

### Accurate Product Monitoring & Identification

#### Ensure Accurate Phase Separation

To achieve accurate measurement using an optical monitoring system, proper setup is important. With METTLER TOLEDO professional installation services, your InPro™ 8300 RAMS system will be set up to most efficiently manage product switching in your operation.

#### Ensure Equipment Longevity

With a high volume of liquid passing through the RAMS monitor, regular cleaning, calibration and desiccant replacement is important. Ensure the longevity of your equipment with professional maintenance services.

#### Recommended InPro 8300 RAMS Services

Frequency	Service Product	Why get it?
At installation	<p><b>Setup and Configuration</b></p> <p>Provides fast and reliable setup and standard configuration to ensure your RAMS optical monitor is ready for use in your application.</p>	<p>Setup and Configuration gets your measurement system up and running quickly and efficiently. It includes:</p> <ul style="list-style-type: none"> <li>• Preparing monitor for specific application</li> <li>• Performing tests to ensure monitor is ready for use</li> <li>• Reviewing monitor with user</li> <li>• Documentation of configuration parameters</li> </ul>
At the point of purchase	<p><b>ExtendedCare</b></p> <p>Maximize uptime and ensure that your optical monitor continues to operate within your process requirements. This package provides preventive maintenance for the first 24 months of its installed lifetime and includes repair coverage and remote support.</p>	<p>With preventive maintenance scheduled from the moment of installation, you can be sure that your optical monitor works for your applications and that it will be properly installed into the process. You also avoid unexpected costs, with repair coverage included.</p>
After the first two years	<p><b>StandardCare</b></p> <p>Verify measurement accuracy and performance to meet your compliance and production requirements over the life of the monitor with regular, pre-planned preventive maintenance. Access the remote helpdesk to troubleshoot issues, and receive priority scheduling of services.</p>	<p>Minimize the risks of incorrect measurement. The StandardCare service package includes a full preventive maintenance, which covers calibration, inspection, cleaning and operational testing to catch any out-of-specification performance issues.</p>
