## Warranty

Defects occurring within 1 year from delivery date shall be remedied free of charge at our plant (carriage and insurance paid by sender). Sensors, fittings, and accessories: 1 year.

©2008 Subject to change without notice

## Return of products under warranty

Please contact our Service Team before returning a defective device. Ship the cleaned device to the address you have been given. If the device has been in contact with process fluids, it must be decontaminated/disinfected before shipment. In that case, please attach a corresponding certificate, for the health and safety of our service personnel.

## Disposal

Please observe the applicable local or national regulations concerning the disposal of "waste electrical and electronic equipment".

---

## Trademarks

The following registered trademarks are used in this instruction manual without further marking

SMARTMEDIA®

# Intended Use

---

The M 700(X) modular process analysis system is preferably used to measure and process electrochemical quantities in liquids. It has a modular design and consists of the BASE power supply unit, the FRONT door and different measuring and communication modules.

M 700 X is intended for operation in locations subject to explosion hazards which require equipment of Group II, device category 2(1), gas/dust.

M 700(X) is a flexible measuring system for continuous measurements in the field of liquid analysis. Thanks to its modular design, it can be easily adapted to your measuring task. Flexible use of plug-in modules allows combined measurements as well as later expansions or modifications. The measured variables depend on the measuring modules installed. Communication modules are available for further processing of the output signals. The sturdy enclosure (IP 65) can be wall or pipe mounted or fixed into a control panel. The version with hygienic, polished stainless steel enclosure allows application in the field of biotechnology, food processing, and in the pharmaceutical industry. The Protos version with coated steel enclosure – extremely corrosion resistant – has been developed for application in the chemical industry, environmental engineering, water and waste-water treatment, and for application in power plants.

## **Caution!**

Never expose the display to direct sunlight!

At ambient temperatures below 0°C, the legibility of the LC display may be reduced. This does not impair the device functions.

# Package Contents

---

- M 700(X) basic unit (FRONT and BASE modules)
- Wall-mount kit
- Test Certificate
- This instruction manual
- CD-ROM with complete documentation (German, English, French)
  - Instruction manuals for all available modules  
incl. EC Declarations of Conformity
  - Excel files for documenting your individual parameter settings
  - Driver files (bus connection)
- For IS devices (M 700 X):
  - EC-Type-Examination Certificate (ATEX),
  - FM and CSA incl. Control Drawings

Modules as ordered (each in a separate package with Installation Instructions, Test Certificate, EC Declaration of Conformity)

# Safety Information

---

## Application in Hazardous Locations

### **M 700 X Modular Process Analysis System**

The M 700 X modular process analysis system is intended for operation in specific environments and specific fields of application. These are listed in the instruction manual as specifications for environment, installation and commissioning, intended use (= application), assembly and dismantling, and maintenance.

Observe the influences of humidity, ambient temperature, chemicals, and corrosion. If the specifications in the instruction manual are not sufficient for assessing the safety of operation, e.g. because your specific applications are not described, please contact the manufacturer to make sure that the application is possible and safe.

Prerequisite to safe use of the equipment is the observance of the specified ambient conditions and temperature ranges.

When using the M 700 X modular process analysis system, the stipulations for electrical installations in hazardous areas (EN 60079-14) must be observed.

When installing the device outside the range of applicability of the 94/9/EC directive, the appropriate standards and regulations in the country of use must be observed.

The M 700 X modular process analysis system has been developed and manufactured in compliance with the applicable European guidelines and standards. Compliance with the European Harmonized Standards for use in hazardous locations is confirmed by the EC-Type-Examination Certificate. Compliance with the European guidelines and standards is confirmed by the EC Declaration of Conformity.

The EC Declaration of Conformity and the EC-Type-Examination Certificate are included in the instruction manual.

There is no particular direct hazard caused by the operation of the device in the specified environment.

During operation, the M 700 X modular process analysis system may

# Safety Information

---

be opened briefly to replace the SmartMedia card. The mains terminal cover must be opened only when the unit is de-energized.

## Installation:

The power supply must be disconnectable near the device by a two-poled switch incorporated in the building installation. This switch must meet the requirements of EN 60947-1 and EN 60947-3, be marked as disconnect device for M 700(X), and be easily accessible by the user.

## Information on Commissioning/Start-up

---

### Caution!

- Before commissioning it must be proved that the device may be connected with other equipment.
- Commissioning must only be performed by trained personnel authorized by the operating company!
- The combination of hazardous-area and safe-area modules (mixed configuration) is not permitted.

Whenever it is likely that protection has been impaired, the device shall be made inoperative and secured against unintended operation. The protection is likely to be impaired if, for example:

- the device shows visible damage
- the device fails to perform the intended measurements
- after prolonged storage at temperatures above 70 °C
- after severe transport stresses

Before recommissioning the device, a professional routine test in accordance with EN 61010-1 must be performed. This test should be carried out at the manufacturer's factory.

# Conformity with FDA 21 CFR Part 11

---

In their directive “Title 21 Code of Federal Regulations, 21 CFR Part 11, Electronic Records; Electronic Signatures” the US American health agency FDA (Food and Drug Administration) regulates the production and processing of electronic documents for pharmaceutical development and production. This results in requirements for measuring devices used for corresponding applications. The following features ensure that the M 700(X) modular process analysis system meets the demands of FDA 21 CFR Part 11:

## **Electronic Signature**

Access to the device functions is regulated and limited by individually adjustable codes – “Passcodes”. This prevents unauthorized modification of device settings or manipulation of the measurement results. Appropriate use of these passcodes makes them suitable as electronic signature.

## **Audit Trail Log**

Every change of device settings can be automatically recorded and documented in the Audit Trail Log on the SmartMedia card. The recording can be encrypted.

Measuring Modules and Communication Modules

# System Overview

M 700(X) Modular Process Analysis System:  
Basic Unit and Controller Module for Retractable Probes

# Modular Concept

---

Basic Unit, Measuring Module, Additional Functions

The M 700(X) is an expandable modular process analysis system. The basic unit (FRONT and BASE modules) provides three slots which can be equipped by the user with any combination of measuring or communication modules. The software capabilities can be expanded by additional functions (options). Additional functions must be ordered separately. They are supplied with a device-specific TAN for function release.

## M 700(X) Modular Process Analysis System

## Documentation

The basic unit is accompanied by a CD-ROM containing the complete documentation.

Latest product information as well as instruction manuals for earlier software releases are available at [www.mtpro.com](http://www.mtpro.com).

# Short Description

Short Description: FRONT Module

## 4 captive screws

for opening the analyzer

**(Caution!** Make sure that the gasket between FRONT and BASE is properly seated and clean!)

## Transflective LC graphic display

(240 x 160 pixels)

white backlighting, high resolution and high contrast.

## Measurement display

## User interface

with plaintext menus as recommended by NAMUR.

Menu texts can be switched to: German, English, French, Italian, Swedish, and Spanish.

Intuitively acquirable menu logic, based on Windows standards.

## Secondary displays

## 2 softkeys

with context-sensitive functions.

## Red LED

signals failure (On) or maintenance request/function check (flashing) according to NE 44.

## Green LED

Voltage supply okay

## Control panel

3 function keys

(menu, meas, enter)

and 4 arrow keys for menu selection and data entries

## 5 self-sealing cable glands

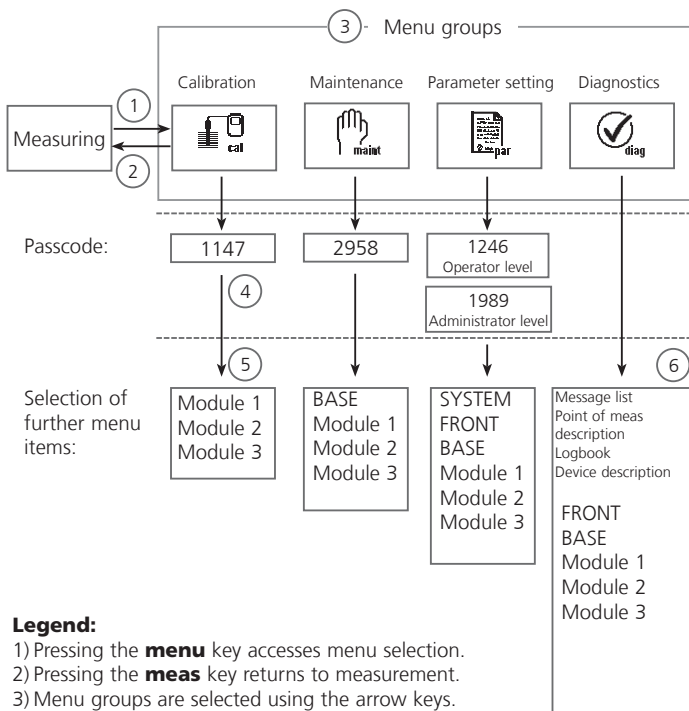

M20 x 1.5

for entry of voltage supply and signal lines

# Short Description: Menu Structure

Basic Functions: Calibration, Maintenance, Parameter Setting, Diagnostics

## Legend:

- 1) Pressing the **menu** key accesses menu selection.
- 2) Pressing the **meas** key returns to measurement.
- 3) Menu groups are selected using the arrow keys.
- 4) Press **enter** to confirm, enter passcode.
- 5) Further menu items are displayed.
- 6) Selected functions of the Diagnostics menu can be recalled via softkey even when in measuring mode.

# Short Description: FRONT Module

View into the open device (FRONT module)

## Slot for SmartMedia card

- Data recording  
The SmartMedia card expands the measurement recorder capacity to > 50000 records.
- Exchange of parameter sets  
5 parameter sets can be stored on the SmartMedia card. The 2 internal parameter sets can be switched by remote control. Configurations can be transmitted from one analyzer to the other.
- Function expansions  
are possible with additional software modules, which are released using transaction numbers (TAN)
- Software updates

## Terminal plates of "hidden" modules

Each module comes with an adhesive label containing the contact assignments. This label should be stuck to the inner side of the front (as shown). Then, the terminal assignments remain visible even if further modules are inserted.

## Replacing the front module

Pull off power cord and ground wire. To separate the FRONT module from the BASE module, turn the retaining screws of the pivot hinge by 90°.

## The circumferential sealing

guarantees IP 65 protection and allows spray cleaning / disinfection.

**Caution!** Keep clean!

# Short Description: BASE Module

View into the open device (BASE module, 3 function modules installed)

## Module equipment

Module identification: Plug & Play.  
Up to 3 modules can be combined as desired. Several input and communication modules are available.

## Notice

Only one module can be connected in addition to a i700 module.

## BASE module

2 current outputs (free assignment of process variable) and 4 relay contacts, 2 digital inputs.  
VariPower broad-range power supply, 20 ... 265 V AC/DC, suitable for all public mains supplies in the world.

## Power supply units, IS version:

100 ... 230 V AC or  
24 V AC/DC

## Warning!

**Do not touch the terminal compartment, there may be dangerous contact voltages!**

## Important notice concerning SmartMedia card

The SmartMedia card may be inserted or replaced with the power supply switched on. Before a memory card is removed, it must be "closed" in the maintenance menu. When closing the device, make sure that the sealing is properly seated and clean.

# Connection of Power Supply

BASE 700-021 Module (Non-IS)

## Connection of Power Supply (BASE 700-021 Module, non-IS)

The M 700(X) comes in three different versions.  
The terminal plates and wirings are shown on the following pages.

### 1. BASE 700-021 module (standard version, non-IS)

VariPower broad-range power supply unit,  
24 (-15 %) ... 230 (+15 %) V AC/DC

### 2. BASE 700X-025/VPW module (IS version)

VariPower broad-range power supply unit

### 3. BASE 700X-026/24V module (IS version)

24 V power supply unit

# 1. BASE 700-021 Module (Non-IS)

Standard Version. Not suitable for hazardous-area applications!

## Installation Instructions

### Caution!

- Installation may only be carried out by trained and qualified personnel in accordance with the instruction manual and as per applicable standards and regulations.
- Be sure to observe the technical specifications and input ratings during installation.
- Be sure not to notch the conductor when stripping the insulation.
- All parameters must be set by a system administrator prior to commissioning.

## Connection of Power Supply

With the VariPower broad-range power supply unit, the analyzer can be operated with a power supply of 24 (-15 %) to 230 (+15 %) V AC/DC making it suitable for all public mains supplies in the world.

The terminals are suitable for single wires and flexible leads up to 2.5 mm<sup>2</sup> (AWG 14).

## Terminal Plate BASE 700-021 Module

Standard version. Not suitable for hazardous-area applications!

Connection of power supply. Contact assignment of inputs/outputs.

## 2. BASE 700X-025/VPW Module (IS)

IS Version with VariPower Power Supply Unit

### Installation instructions

When using the M 700 X modular process analysis system, the stipulations for electrical installations in hazardous areas (EN 60079-14) must be observed. When installing the device outside the range of applicability of the 94/9/EC directive, the appropriate standards and regulations in the country of use must be observed.

#### Caution!

- Installation may only be carried out by trained and qualified personnel in accordance with the instruction manual and as per applicable standards and regulations.
- Be sure to observe the technical specifications and input ratings during installation.
- Be sure not to notch the conductor when stripping the insulation.
- All parameters must be set by a system administrator prior to commissioning.

### Connection of Power Supply

With the VariPower broad-range power supply unit, the analyzer can be operated with a power supply of 100 to 230 V AC (-15 %, +10 %) (EEx em IIC).

The terminals are suitable for single wires and flexible leads up to 2.5 mm<sup>2</sup> (AWG 14).

### Terminal Plate BASE 700X-025/VPW Module

(IS version with VariPower power supply unit)

Connection of power supply. Contact assignment of inputs/outputs.

# 3. BASE 700 X-026/24V Module (IS)

IS Version with 24 V Power Supply Unit

## Installation instructions

When using the M 700 X modular process analysis system, the stipulations for electrical installations in hazardous areas (EN 60079-14) must be observed. When installing the device outside the range of applicability of the 94/9/EC directive, the appropriate standards and regulations in the country of use must be observed.

### Caution!

- Installation of the analyzer may only be carried out by trained experts in accordance with this instruction manual and as per applicable local and national codes.
- Be sure to observe the technical specifications and input ratings during installation.
- Be sure not to notch the conductor when stripping the insulation.
- All parameters must be set by a system administrator prior to commissioning.

## Connection of Power Supply

With the power supply unit, the analyzer can be operated with a power supply of 24 V AC (-15 %, +10%) or 24 V DC (-15 %, +20%).

The terminals are suitable for single wires and flexible leads up to 2.5 mm<sup>2</sup> (AWG 14).

## Terminal Plate BASE 700X-026/24V Module

(IS version with 24 V power supply unit)

Connection of power supply. Contact assignment of inputs/outputs.

# Operation (FRONT Module)

## Menu Structure

### Legend:

- 1) Pressing the **menu** key accesses menu selection.
- 2) Pressing the **meas** key returns to measurement.
- 3) Menu groups are selected using the arrow keys
- 4) Press **enter** to confirm, enter passcode
- 5) Further menu items are displayed
- 6) Selected functions of the Diagnostics menu can be recalled via softkey even when in measuring mode (Pg 39)

# Menu Selection

## FRONT Module

After switching on, the analyzer first performs an internal test routine and automatically detects the number and type of modules installed. Then, the analyzer goes to measuring mode (Pg 39).

- Configure measurement display **(7)**  
Pg 40
- Secondary displays/softkeys **(8)** Pg 41

## Menu Selection

- 1) Pressing the **menu** key accesses menu selection.
- 2) Pressing the **meas** key returns to measurement.

(Measuring mode)

(Menu selection)

Select the desired menu group using the arrow keys **(3)**. Press **enter** **(4)** to confirm your choice. An overview of the menu structure is given on Pg 34.

# Mode Indicators in the Display

## Icons

The plain-text user interface is supplemented by icons which provide information on the operating status:

### HOLD

The NAMUR "HOLD" mode is active (NAMUR "HOLD" contact (function check)); as delivered, that is the K2 contact of the BASE module (normally open contact). This setting can be changed as required - the contacts K2 ... K3 are for free programming. The current outputs behave as configured (you can adjust: last usable value, fixed, 22 mA).

The screenshot shows a menu interface with the following elements:

- SmartMedia card**: located in FRONT module (indicated by an arrow pointing to a card icon).
- Mode indication**: Parameter setting (indicated by an arrow pointing to a 'HOLD' icon).
- Module identification**: In the submenus the currently measured values of the respective module are displayed here. (number of module slot, no module designation) (indicated by an arrow pointing to '0.120 mS/cm' and '19.0 °C').
- Menu level (Administrator level)**: (indicated by an arrow pointing to 'Module BASE (Administrator)').
- Current selection**: The current selection is displayed in reverse video. Gray display lines cannot be edited. (indicated by an arrow pointing to 'Contact K4 (NAMUR Failure)').
- Safety of operation**: To ensure increased safety of operation, the device provides three operating levels:
  - Administrator level  
Access to all device parameters. Settings can be blocked against access from the Operator level.
  - Operator level  
Access to all functions which have been released at the Administrator level. Blocked functions are displayed in gray and cannot be edited.
  - Viewing level  
Display of all settings. No editing possible.(indicated by an arrow pointing to the 'Block' button).

Additional menu items visible: Output current I1, Output current I2, Contact K3 (NAMUR maintenance), Contact K2 (NAMUR HOLD), Contact K1 (Limit), Return, and Block.

Display	Explanation of Display Icons
	The analyzer is in measuring mode, an ISM sensor is connected.
	The device is in calibration mode. HOLD mode is active.
	The device is in maintenance mode. HOLD mode is active.
	The device is in parameter setting mode. HOLD mode is active.
	The device is in diagnostics mode.
<b>NAMUR signals</b>   	<p><b>HOLD.</b> The NAMUR "HOLD" contact is active (factory setting: Module BASE, Contact K2, N/O contact). Current outputs as configured:</p> <ul style="list-style-type: none"> <li>• Current meas.: The currently measured value appears at the current output</li> <li>• Last usable value: The last measured value is held at the current output</li> <li>• Fixed 22 mA: The output current is at 22 mA</li> </ul> <p><b>Failure:</b> The NAMUR "failure" contact is active (factory setting: Module BASE, Contact K4, N/C contact). To view error message, call up: Diagnostics menu/Message list</p> <p><b>Maintenance:</b> The NAMUR "maintenance request" contact is active (factory setting: Module BASE, Contact K2, N/O contact). To view error message, call up: Diagnostics menu/Message list</p>
	Limit indication: Lower / upper range limit exceeded
	The analyzer contains a SmartMedia "memory card". The card is closed and can be removed or enabled in the maintenance menu.
	The analyzer contains an enabled SmartMedia "memory card". During data recording the dot in the icon flashes. Please note: "Close memory card" in the maintenance menu before removing the SmartMedia card.
	The analyzer contains a SmartMedia "update card". You can save the current device software or perform a software update from the SmartMedia card. Be sure to check the configuration after the update is completed.
	The analyzer contains a SmartMedia card of the type "memory card to FDA 21 CFR Part 11". Serves for consistent recording of all operations (SW 700-107).
	Displayed in plain text, when the analyzer is controlled via PROFIBUS PA. Only in conjunction with a BUS module. Different representation for Foundation Fieldbus.
	Designates the module slot (1, 2 or 3), allowing the clear assignment of measured-value/parameter displays in the case of identical module types.
	Indicates the active parameter set. (The analyzer provides two parameter sets A and B. Up to 5 sets can be added using additional functions and SmartMedia card.)

# How to Enter Numbers and Text

## FRONT Module

Select the position using the **left/right** keys, then edit the number or letter using the **up/down** keys. Confirm with **enter**.

Example: Entering a tag number (point of measurement)

- Open the menu selection (**menu**)
- Select parameter setting
- Administrator level, enter passcode
- Select point of measurement:

# Configuring the Measurement Display

FRONT Module

Select menu: Parameter setting/Module FRONT/Measurement display

Pressing **meas** returns the analyzer to the measuring mode from any function. (Pressing **meas** in measuring mode, successively displays the activated special functions such as measurement recorder or KI recorder).

All process variables coming from the modules can be displayed. The table on the next page describes how to configure the measurement display.

## Measurement display

Typical measurement display (pH, Cond modules)

## Secondary displays

Additional values, also date and time, can be displayed depending on the modules installed. They are selected using the softkeys (Pg 41).

## Softkeys

The softkeys allow selection of values for the secondary displays. In addition, Diagnostics functions which are set as "Favorites" can be called up (Pg 42).

If required, you can also change the parameter set via softkey (Pg 42) Furthermore, the softkeys include - self-explaining - context-sensitive functions, e.g. with measurement or KI recorder activated.

Menu	Display	Configure measurement display
		<p><b>Configure measurement display</b></p> <p>Press <b>menu</b> key to Menu selection          Select parameter setting using arrow keys, confirm with <b>enter</b>. Select:          "Administrator level": Passcode 1989</p>
		<p>Parameter setting:          Select "Module FRONT"</p>
		<p>Front module:          Select "Measurement display"</p>
		<p>Measurement display:          Set the number of primary values (large display) to be displayed</p>
		<p>Select process variable(s) to be displayed and confirm with <b>enter</b>.</p> <p>Pressing the <b>meas</b> key returns to measurement.</p>

# Softkey Function (Function Control)

FRONT Module

Select menu: Parameter setting/System control/Function control matrix

In measuring mode you can use the **softkeys (1)** to control functions. The functions are assigned in the function control matrix (Fig.) (Parameter setting/System control).

Softkeys which have not been assigned to a certain function are automatically used for selecting the secondary displays.

## Secondary Display (2)

Here, additional values are displayed in the measuring mode. They are selected by pressing the respective softkey. Always active.

You can choose one of the process variables supplied by the modules (and Calculation Blocks) or the date or time.

## Favorites Menu

Selected Diagnostics functions can be called up directly from the measuring mode using a softkey. The following table (Pg 42) explains how to select favorites.

Further functions which can be controlled via softkey:

- Parameter set
- EC 400 probe controller

	ParSet	KI rec.	♡Fav	EC 400
Input OK2	<input type="radio"/>	<input type="radio"/>	-	-
Left softkey	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	-
Right softkey	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	-
Profibus DO 2	<input type="radio"/>	<input type="radio"/>	-	-

Return      Connect

### Example:

"Parameter set" to be selected with "Left softkey".

### To select a softkey function:

Select the control element ("Left softkey"), then the "ParSet" function. Then press "Connect" softkey and confirm with **enter**.

### To deselect a function:

Press "Disconnect" softkey, confirm with **enter**.

Menu	Display	Select favorites
		<p><b>Favorites menu</b> Diagnostics functions can be called up directly from the measuring mode using a softkey. The “Favorites” are selected in the Diagnostics menu.</p>
		<p><b>Select favorites</b> Press <b>menu</b> key to Menu selection. Select diagnostics using arrow keys, confirm with <b>enter</b>.</p>
		<p>Set/delete favorite: “Set favorite” allows activation of the selected diagnostic function directly from the measuring mode via softkey. The respective function is marked with a heart icon. (See Softkey Function, Pg 41).</p>
		<p>Pressing the <b>meas</b> key returns to measurement. When the softkey has been assigned to “Favorites”, “Favorites menu” is read in the secondary display (See Softkey Function, Pg 41).</p>

**Notice:**

When one of the softkeys has been assigned to the “Favorites menu” function, diagnostic functions which have been set as “Favorite” can be directly called up from the measuring mode.

# Documenting Parameter Setting

---

You must reproducibly document all parameter settings in the device to achieve a high level of system and device security according to GLP. For that purpose, an Excel file is provided (on the CD-ROM shipped with the basic device or as download at [www.mtpro.com](http://www.mtpro.com)) to enter the parameter settings.

The Excel file provides one worksheet for each module with columns for the following parameters: Factory settings, parameter set A, parameter set B.

Enter your settings as parameter set A or B.

The gray cells in the parameter set B column cannot be modified since they contain sensor-specific values which cannot be changed by parameter set switchover. Here, the values listed under parameter set A apply.

# Documenting Parameter Setting

# Calculation Blocks (System Control)

Select menu: Parameter setting/System control/Calculation Blocks

Calculation of new variables from measured variables

## Calculation Blocks

Two measuring modules with all their measured values serve as input for the calculation block. In addition, the general device status (NAMUR signals) is taken into account. The following variables are calculated from the existing values:

- Ratio
  - Pass (passage)
  - Reject (rejection)
  - Measured-value difference
  - Deviation
  - pH value calculation by means of dual conductivity measurement
- These output variables are then available in the system and can be assigned to the outputs (current, limit values, display ...)

## Functionality of Measuring Module

## Functionality of Calculation Block

# Activating Calculation Blocks

Select menu: Parameter setting/System control/Calculation Blocks  
Combining measuring modules to Calculation Blocks

## Combining Measuring Modules

With three measuring modules the following Calculation Block combinations are possible:

 +  ,  +  ,  + 

Two Calculation Blocks can be activated.

Menu	Display	Activating Calculation Blocks
	 <p>System control (Administrator)</p> <ul style="list-style-type: none"> <li>Calculation Blocks</li> <li>Point of measurement</li> <li>Release of options</li> <li>Logbook</li> <li>Buffer table</li> <li>Concentration table</li> </ul> <p>Return</p>	<b>Calculation Blocks</b> <ul style="list-style-type: none"> <li>Call up parameter setting</li> <li>System control</li> <li>Select "Calculation Blocks"</li> </ul>

	 <p>Parameter setting (Administrator)</p> <ul style="list-style-type: none"> <li>System control</li> <li>Module FRONT 700-011</li> <li>Module BASE 700-021</li> <li>Module pH 2700</li> <li>Module pH 2700</li> <li>Module pH/pH</li> </ul> <p>Return</p>	<p>During parameter setting the Calculation Blocks are displayed like modules.</p>

# Overview of Calculation Blocks

Module Combinations, Calculation Block, Process Variables

Module combination	Calculation Block	Variables calculated by the Calculation Block	
pH + pH	Calc pH/pH	Difference Difference Difference	pH ORP °C
Cond + Cond Condl + Condl Cond + Condl	Calc Cond/Cond	Difference Difference Difference Ratio Passage (Pass) Rejection (Reject) Deviation (Deviat) Deviation (Deviat)	S/cm Ohm*cm °C S/cm [] S/cm[%] S/cm[%] S/cm[%] pH
Oxy + Oxy	Calc Oxy/Oxy	Difference Difference Difference Difference Difference	%Air %O <sub>2</sub> g/l ppm °C
CO <sub>2</sub> + CO <sub>2</sub>	Calc CO <sub>2</sub> /CO <sub>2</sub>	Difference	°C

## New Process Variables and Signal Processing

### Current outputs

All current outputs can be set to output the new process variables formed by the Calculation Blocks.

### Measurement display

All new process variables can be displayed as primary or as secondary value.

### Controller

Controller functions are not supported.

# Calculation Formulas

Module Combinations, Calculation Block, Process Variables

Variable	Calculation formula	Range	Span
Difference (selectable in menu)	DIFF = A - B or DIFF = B - A	Variable	Variable
Ratio (selectable in menu)	$RATIO = \frac{A}{B}$	0.00 ... 19.99	0.10
Passage	$PASS = \frac{B}{A} \cdot 100$	0.00 ... 199.9	10 %
Rejection	$REJECT = \left(1 - \frac{B}{A}\right) 100 \%$	-199.9 ... 199.9	10 %
Deviation	$DEVIAT = \left(\frac{B}{A} - 1\right) 100 \%$	-199.9 ... 199.9	10 %

## pH Value Calculation by Means of Dual Conductivity Measurement

See instruction manual for Cond 7700 module. Principle:

$$c(\text{NaOH}) = \frac{\text{COND1} - 1/3 \text{COND2}}{243}$$

$$\text{pH} = 11 + \log[c(\text{NaOH})]$$

# Configuring a Calculation Block

Select menu: Parameter setting/System control/Calculation Blocks

Setting the process variable to be calculated

Menu	Display	Calculation Block Configure
		<p><b>Select Calculation Block</b></p> <ul style="list-style-type: none"> <li>• Call up parameter setting</li> <li>• System control</li> <li>• Select module</li> </ul>
		<ul style="list-style-type: none"> <li>• Depending on the modules installed, the possible combinations for Calculation Blocks are offered.</li> </ul>
		<p><b>Messages</b></p> <p>You can activate messages for the selected variables.</p> <p>Variables which have been set as "Off" cannot be processed further.</p> <p>The measured values which shall release a message are set using the arrow keys (left/right: select position, up/down: edit number). Confirm with <b>enter</b>.</p>

# Logbook, Factory Setting

Parameter setting/System control/Logbook

**Note:** HOLD mode

Menu	Display	Logbook, factory setting

The last 50 events are recorded with date and time.</p> <p>This permits quality management documentation to ISO 9000 et seq.</p> <p>The logbook can be called up from the diagnostics menu (Fig.).</p> <p>Additional function SW 700-104: Extended logbook for recording data on SmartMedia card (TAN).</p> <h2>Factory setting</h2> <p>Allows resetting the parameters to their factory setting.</p> <p>When this menu is opened, the analyzer displays a warning (Fig.).</p>

# Switching Between Parameter Sets A, B

## Parameter Sets A, B

2 complete parameter sets (A, B) can be stored in the analyzer.

An icon in the measurement display shows which parameter set is active:

Excel "Parameter settings" spreadsheet at [www.mtpro.com](http://www.mtpro.com).

The control element for switching between the parameter sets (optocoupler, softkey, or PROFIBUS) is selected at "Parameter setting/System control/Function control matrix". The currently activated set can be signaled by a relay contact.

Menu	Display	Parameter sets
		<b>Select control element for switching between the parameter sets</b> <ul style="list-style-type: none"><li>• Open menu selection</li><li>• Parameter setting, Admin. level</li><li>• Enter passcode</li><li>• System control: Select "Function control matrix"</li></ul>
		<b>Parameter sets A, B</b> <ul style="list-style-type: none"><li>• Open menu selection</li><li>• Parameter setting, Admin. level</li><li>• Enter passcode</li><li>• System control</li><li>• Select "Parameter sets" menu and confirm with <b>enter</b>.</li></ul>
		<ul style="list-style-type: none"><li>• <b>Save parameter set</b></li></ul> <p>The active parameter set A overwrites the internal parameter set B.</p> <ul style="list-style-type: none"><li>• <b>Load parameter set</b></li></ul> <p>Parameter set B is loaded.</p>

# Current Outputs, Contacts, OK Inputs

Select menu: Parameter setting/Module BASE

**Note:** HOLD mode active

Menu	Display	Parameter setting BASE module
		Configure current output <ul style="list-style-type: none"> <li>• Call up parameter setting</li> <li>• Enter passcode</li> <li>• Select "Module BASE"</li> <li>• Select "Output current ..."</li> </ul>
		<ul style="list-style-type: none"> <li>• Select measured variable</li> </ul>
		<ul style="list-style-type: none"> <li>• Select Curve, e.g. "linear": The measured variable is represented by a linear output current curve. The desired range of the measured variable is specified by the values for "Start" and "End".</li> </ul>

## Assignment of Measured Values: Start (4 mA) and End (20 mA)

Example 1: Range pH 0 - 14

Example 2: Range pH 5 - 7

Advantage: Higher resolution in range of interest

# Current Outputs: Characteristics

---

Select menu: Parameter setting/Module BASE

- **Linear characteristic**

The measured variable is represented by a linear output current curve.

- **Trilinear characteristic**

Two additional corner points must be entered:

- **Note: Bilinear characteristic**

For a bilinear characteristic, identical parameters are entered for the two corner points (1st corner, 2nd corner).

## • Function characteristic

Nonlinear output current characteristic: allows measurements over several decades, e.g. measuring very low values with a high resolution and high values with a low resolution.

Required: Entering a value for 50 % output current.

## Equation

$$\text{Output current (4 ... 20 mA)} = \frac{(1+K)x}{1+Kx} 16 \text{ mA} + 4 \text{ mA}$$

$$K = \frac{E + S - 2 * X50\%}{X50\% - S} \qquad x = \frac{M - S}{E - S}$$

S: Start value at 4 mA

X50%: 50% value at 12 mA (output current range 4 to 20 mA)

E: End value at 20 mA

M: Measured value

## Logarithmic output curve over one decade:

S: 10 % of maximum value

X50%: 31.6 % of maximum value

E: Maximum value

## Logarithmic output curve over two decades:

S: 1 % of maximum value

X50%: 10 % of maximum value

E: Maximum value

# Output Filter

---

Time constant.

## Time constant of output filter

To smoothen the current output, a low-pass filter with adjustable time constant can be switched on. When there is a jump at the input (100 %), the output level is at 63 % after the time constant has been reached.

The time constant can be set from 0 to 120 sec. If the time constant is set to 0 sec, the current output follows the input.

## Notice

The filter only acts on the current output and the current value of the secondary display, not on the measurement display, the limit values, or the controller!

Time constant 0 to 120 s

# NAMUR Signals: Current Outputs

Behavior during messages: HOLD, 22 mA signal

## Behavior during messages

Depending on the parameter setting ("Messages") the current outputs switch to:

- Currently measured value
- Last measured value (HOLD function)
- Fixed value (22 mA)

In the case of a fault a 22 mA signal can be generated for the selected process variable (1st primary value).

## Message when the current range is exceeded

As delivered, the "Maintenance request" (Warn) message is generated when the current range is exceeded (< 3.8 mA or > 20.5 mA).

This setting can be changed in the Parameter setting menu of the respective measuring module at "Messages".

To generate a "Failure" message, the limit value monitoring must be set to "Variable limits":

Parameter setting - <measuring module> - Messages - Variable limits - Failure limit ...

Enter the same values for the failure limits as for the current output:

Parameter setting - Module BASE - Output current - Variable Start / End.

# NAMUR Signals: Relay Contacts

Failure, Maintenance Request, HOLD (Function Check)

As delivered, the floating relay outputs of the BASE module are assigned to the NAMUR signals:

**Failure**

Contact K4, normally closed  
(signaling current failure)

**Maint. request**

Contact K3, normally open contact

**HOLD**

Contact K2, normally open contact

**NAMUR signals:** Factory setting of contacts

- Select parameter setting:
- Administrator level
- Select "Module BASE" (Fig.)

You can define a delay time for "Maintenance request" and "Failure", resp. If an alarm message is released, the contact will only be activated after expiry of this delay time.

**Failure** is active

when a value has exceeded (or fallen below, resp.) a preset "Failure Limit Hi" or "Failure Limit Lo", when the measured value is out of range, or in the event of other failure messages. That means that the equipment no longer operates properly or that process parameters have reached a critical value. Failure is disabled during "HOLD" (Function check).

**Maintenance request** is active

when a value has exceeded (or fallen below, resp.) a preset "Warning Limit Hi" or "Warning Limit Lo", or when other warning messages have been activated. That means that the equipment is still operating properly but should be serviced, or that process parameters have reached a value requiring intervention.

Failure is disabled during "HOLD" (function check).

**HOLD** is active:

- during calibration
- during maintenance (current source, meas. point maintenance)
- during parameter setting at the Operator level and the Administrator level
- during an automatic rinsing cycle.

# Relay Contacts: Protective Wiring

---

## Protective Wiring of Relay Contacts

Relay contacts are subjected to electrical erosion. Especially with inductive and capacitive loads, the service life of the contacts will be reduced. For suppression of sparks and arcing, components such as RC combinations, nonlinear resistors, series resistors and diodes should be used.

### Typical AC applications with inductive load

- 1 Load
- 2 RC combination, e.g. RIFA PMR 209  
Typical RC combinations  
e.g.  
Capacitor 0.1  $\mu$ F,  
Resistor 100 ohms / 1 W
- 3 Contact

## Caution!

Make sure that the maximum ratings of the relay contacts are not exceeded even during switching!

## Information Concerning Relay Contacts

As delivered, the relay contacts are suitable for low signal currents (down to approx. 1mA). If currents above approx. 100 mA are switched, the gold plating is destroyed during the switching process. After that, the contacts will not reliably switch low currents.

# Relay Contacts

Parameter setting/Module BASE/Relay contacts

Menu	Display	Setting the relay contacts
		<b>Relay contacts, usage</b> <ul style="list-style-type: none"> <li>• Call up parameter setting</li> <li>• Enter passcode</li> <li>• Select "Module BASE"</li> <li>• Select "Contact ..."</li> <li>• "Usage" (Fig.)</li> </ul>

## Contact assignment:

See terminal plate of BASE module

The BASE module provides 4 relay contacts (max. AC/DC rating 30 V / 3 A each). Contact K4 is provided for failure message. The switching behavior (normally open or normally closed), as well as a switch-on or switch-off delay can be defined.

## Default settings of the user-definable relay contacts of the BASE module:

K3: NAMUR maintenance request  
 K2: NAMUR HOLD (function check)  
 K1: Limit

## K1-K3 are user definable ("Usage"):

- NAMUR maintenance
- NAMUR HOLD
- Limit value
- Rinse contact
- Parameter set B active
- USP output (Cond module only)
- K1 rec. active
- Sensoface
- Controller alarm

# Relay Contacts: Sensoface Messages

Parameter setting/Module BASE/Relay contacts/Usage/Sensoface

Menu	Display	Parameter setting (Sensoface)
		<p><b>Assign Sensoface Messages to Relay Contacts</b></p> <p>When more than one measuring module is used, the Sensoface messages of the modules can be assigned to different contacts.</p>
		<p><b>Relay Contacts, Usage</b></p> <ul style="list-style-type: none"> <li>• Open Parameter Setting</li> <li>• Enter passcode</li> <li>• Select "Module BASE"</li> <li>• Select contact e.g. K1)</li> <li>• Assign Sensoface message of desired measuring module to selected relay contact</li> </ul>
		<p><b>Set Contact Parameters</b></p> <ul style="list-style-type: none"> <li>• (e.g. "N/O")</li> <li>• Set ON / OFF delay.</li> </ul>

# Rinse Contact

Parameter setting/Module BASE/Relay contacts/Usage/Rinse contact

Menu	Display	Configuring the rinse contact
		<p><b>Relay contacts, usage</b></p> <ul style="list-style-type: none"> <li>• Call up parameter setting</li> <li>• Enter passcode</li> <li>• Select "Module BASE"</li> <li>• Select contact e.g. K1</li> <li>• "Rinse contact" (Fig.)</li> </ul>
		<p><b>Configuring the rinse contact</b></p> <ul style="list-style-type: none"> <li>• Set rinse interval</li> <li>• Set rinse duration</li> <li>• During the defined "lead time" the "HOLD" mode is active.</li> <li>• Select contact type (e.g. "N/O")</li> </ul>

## Please note when configuring the "Rinse contact" function

- "HOLD" mode (e.g. during parameter setting) delays the execution of the "Rinse contact" function.
- Up to 3 rinse functions (contacts K1 ... K3) can be configured independently.
- The individual rinse functions are not synchronized with each other.

## Time Response

# Limit Value, Hysteresis, Contact Type

Parameter setting/Module BASE/Relay contacts/Usage

Menu	Display	Usage as limit value
		<b>Relay output: Limit</b> <ul style="list-style-type: none"><li>• Call up parameter setting</li><li>• Enter passcode</li><li>• Select "Module BASE"</li><li>• Select "Contact ..."</li><li>• "Usage: Limit" (Fig.)</li></ul>

## Limit value ▼

Effective direction min

## Limit value ▲

Effective direction max

## Icons in the measurement display:

Measured value exceeds limit: ▲ Measured value falls below limit: ▼

## Hysteresis

Tolerance band around the limit value, within which the contact is not actuated. Serves to obtain appropriate switching behavior at the output and suppress slight fluctuations of the measured variable (Fig.)

## Contact type

Specifies whether the active contact is closed (N/O) or open (N/C).

# OK1, OK2 Inputs: Specify Level

Parameter setting/Module BASE/Inputs OK1, OK2

**Note:** HOLD mode (setting: BASE module)

Menu	Display	Setting the OK inputs
	 <p>Inputs OK1, OK2 (Administrator)</p> <p>For OK2 usage see "Function control matrix"</p> <p>OK1 usage Off</p> <p>OK2 usage HOLD</p> <p>Return</p>	<b>OK1 usage</b> <ul style="list-style-type: none"><li>• Call up parameter setting</li><li>• Enter passcode</li><li>• Select "Module BASE"</li><li>• Select "Inputs OK1/OK2"</li><li>• Select "OK1 usage"</li></ul>
	 <p>Inputs OK1, OK2 (Administrator)</p> <p>For OK2 usage see "Function control matrix"</p> <p>OK1 usage ▾ Funct. check</p> <p>Input OK1 active 10 ... 30 V</p> <p>Input OK2 active &lt; 2 V</p> <p>Return OK</p>	<b>OK1/OK2 switching level</b> <ul style="list-style-type: none"><li>• Call up parameter setting</li><li>• Enter passcode</li><li>• Select "Module BASE"</li><li>• Select "Inputs OK1/OK2"</li><li>• Specify active switching level</li></ul>

The BASE module provides 2 digital inputs (OK1, OK2). The following functions (depending on the parameter setting) can be started via a control signal:

- OK1: "Off" or "HOLD" (Function check)
- OK2: Select: System control / Function control matrix ("Off", "Parameter set A/B", "Start KI recorder")

The switching level for the control signal must be specified:  
(active 10...30 V or active < 2 V).

# Switching Parameter Sets via OK2

Parameter setting / System control / Function control matrix

**Note:** HOLD mode (setting: BASE module)

## Parameter sets

2 complete parameter sets (A, B) can be stored in the analyzer.

You can switch between the parameter sets using the OK2 input.

The currently activated set can be signaled by a relay contact.

An icon in the measurement display shows which parameter set is active:

Menu	Display	Parameter sets
		<b>Selecting parameter set (A, B) via OK2 input</b> <ul style="list-style-type: none"><li>• Call up parameter setting</li><li>• System control</li><li>• Function control matrix</li><li>• Select "OK2"</li><li>• Connect "Parameter set A/B"</li></ul>
		<b>Signaling active parameter set via relay contact</b> <ul style="list-style-type: none"><li>• Call up parameter setting</li><li>• BASE module</li><li>• Select contact</li><li>• Usage: "Parameter set ...".</li></ul>

## Notice

The selection has no effect when working on SmartMedia card with SW 700-102.

# Inserting the SmartMedia Card

---

## Please note when inserting the SmartMedia card:

Protect against electrostatic discharge!

The analyzer must be opened to insert or replace the SmartMedia card.

Power can remain on. When closing the device, make sure that the sealing is properly seated and clean.

### Warning!

**Do not touch the terminal compartment, there may be dangerous contact voltages!**

### 1. Open the analyzer

- Loosen the 4 front screws
- Open the FRONT module at its right side (pivot hinge inside at the left)
- The slit for inserting the SmartMedia card is located at the inner side of the FRONT module

### 2. Insert SmartMedia card

- Remove SmartMedia card without touching the contact surface from its package
- Insert card in the slit at the inner side of the FRONT module

### Inserting the SmartMedia card:

The label must be facing you.

### 3. Remove SmartMedia card

- To avoid data loss, please call up the Maintenance menu.
- Select "Close memory card" to terminate software access to the SmartMedia card. Now the card can be taken out.

# SmartMedia Card: Types

---

## Types of SmartMedia Cards Provided by the Manufacturer

The SmartMedia cards are supplied preformatted as:

- Memory Card (SW 700-102 ... 1xx)
- Software update (SW 700-106)

## SmartMedia Card: Display Icons

When the analyzer has recognized the SmartMedia card, it displays an icon resembling a SmartMedia card:

### Memory Card (SW 700-102 ... 1xx)

This type of card allows the storage of data (e.g. configuration, parameter sets, logbook, measurement recorder data).

The icon flashes to indicate active data transmission.

### SmartMedia Card Locked Against Data Access

(type "memory card")

To avoid data loss, a memory card must be "closed" in the Maintenance menu before it is removed.

The icon shown on the left is displayed.

Now the card can be taken out.

(A locked card can be opened in the Maintenance menu.)

### Software Update Card (Additional Function SW 700-106)

This SmartMedia card is specially preformatted and allows a software update. In that case the previous operating program of the analyzer ("firmware") will be replaced by a new version.

An update card can also be used to save older versions of the operating program. You cannot save general data on a SmartMedia card of the type "Update card". By formatting an update card you can generate a "memory card" (irreversible!) Formatting erases the update!

# SmartMedia Card: Memory Cards

## Formatting Commercial SmartMedia Cards

### Commercially Available SmartMedia Card as Memory Card.

The following types of cards are supported: 8 MB, 16 MB, 32 MB, 64 MB, and 128 MB. Externally produced files, such as from a digital camera, are tolerated. Long file names can be read. The M 700(X) generates file names in the 8.3 format (8 characters file name, 3 characters program-specific file name extension).

### Formatting a Commercial SmartMedia Card

Please format a commercial SmartMedia card as M 700 memory card before use.

Please do NOT format the card in a PC card reader, always use the M 700!

Menu	Display	Formatting commercial SmartMedia cards
		<b>Format</b> <ul style="list-style-type: none"><li>• Insert SmartMedia card</li><li>• Open menu selection</li><li>• Parameter setting, Admin. level</li><li>• Enter passcode</li><li>• System control: Memory card ("Memory card" function only available with SmartMedia card inserted!)</li><li>• Format card</li></ul>

### File Structure of a Memory Card

Folder	Typ. file name	Remark
BACKUP LOGBOOK	BACKUP01.PAR L_YYMM00.TXT	BACKUP device configuration Logbook file, YY=year, MM= month
PARASET RECORDER	SET 1 R_YYMMDD.TXT	Parameter set Recorder entry, YY=year, MM=month, DD=day

# Saving / Loading Device Configuration

---

Parameter setting/System control/Copy configuration

## Saving / Loading the Complete Device Configuration

Parameter setting/System control/Memory card/Copy configuration

“Save” configuration means that the complete device configuration (except the passcodes) is written on the memory card.

“Load” configuration means that the complete device configuration is read from the memory card and programmed.

BACKUP file generated on SmartMedia card: \BACKUP\BACKUP01.PAR

## Transferring the Complete Device Configuration from one Device to Further Devices

Prerequisite:

The devices have the same hardware equipment, the modules are placed in the same slots (e.g. pH 2700 in slot I, Cond 7700 in slot II etc.).

Options:

All required options must be enabled in the “master device”, the options in the “slave devices” can be a subset of them.

Only the option parameters are transferred, not the option itself.

When an option is enabled in a “slave device” at a later point in time, the parameters of this option are already initialized according to the “master device”.

1) Write device configuration of configured device on SmartMedia card:

Parameter setting/System control/Copy configuration/Save.

2) Change to maintenance menu. Select “Close memory card”.

3) Remove the SmartMedia card. Now you can transfer the device configuration to further identically equipped devices.

4) To do so, insert the SmartMedia card containing the configuration in the next device to be configured.

Select

Parameter setting/System control/Copy configuration/Load.

5) Change to maintenance menu. Select “Close memory card”.

6) Remove the SmartMedia card.

# Using the Memory Card

Parameter setting/System control/Memory card

Menu	Display	Using the memory card
	 	<p><b>To use the memory card</b></p> <ul style="list-style-type: none"><li>• Insert SmartMedia card</li><li>• Open menu selection</li><li>• Parameter setting, Admin. level</li><li>• Enter passcode</li><li>• System control: Memory card</li></ul> <p>With SmartMedia card inserted, the display shown on the left appears (The “Memory card” line is displayed only if a memory card is in the slot).</p> <ul style="list-style-type: none"><li>• Select “Memory card”, confirm with <b>enter</b>.</li></ul> <p>The menu is self-explanatory.</p> <p><b>Behavior when the memory card is full:</b></p> <p>Continuous recording (as with a flight recorder) or Stop (card replacement).</p>
		<p><b>Copy configuration</b></p> <ul style="list-style-type: none"><li>• Save: Saving all data on the memory card</li><li>• Load: Overwriting all device data with the data from the memory card</li></ul> <p><b>Caution! “Close” memory card before removing it (Maintenance menu)</b></p>

# Formatting the Update Card

Parameter setting/System control/Format card

**Note:** HOLD mode active

Menu	Display	Formatting the update card (generate memory card)
	 <p>Software update (Administrator)</p> <p>Updating will change the device characteristics. Perform verification as appropriate!</p> <ul style="list-style-type: none"><li>Update firmware</li><li>Save firmware</li><li><b>Format card</b></li></ul> <p>Return</p>	<p><b>To format the card</b></p> <ul style="list-style-type: none"><li>• Insert SmartMedia card</li><li>• Open menu selection</li><li>• Parameter setting, Admin. level</li><li>• Enter passcode</li><li>• System control: Format card</li></ul>
	 <p>Format card (Administrator)</p> <p>Caution: All data on the memory card are deleted!</p> <p>Return      Format</p>	<p>Formatting an update card generates a memory card.</p> <p><b>Caution! This process is irreversible!</b></p> <p>Double warning messages protect against faulty operation.</p>
	 <p>Format card (Administrator)</p> <p>Formatting ended. The card can be removed now.</p> <p>Close</p>	<p>When formatting is finished, a message will be displayed.</p>

## Caution!

Please do NOT format the memory card in a PC card reader, always use the M 700!

# SmartMedia Card: Remove Card

Maintenance/Removing Memory Card

**Note:** HOLD mode active

Menu	Display	Close memory card
		<p><b>Caution!</b> <b>“Close” memory card before removing it (Maintenance menu)</b> Otherwise you risk losing data.</p> <p><b>Remove memory card</b></p> <ul style="list-style-type: none"><li>• Insert SmartMedia card</li><li>• Open menu selection</li><li>• Maintenance, Memory card</li><li>• “Close card”</li></ul> <p><b>Close memory card</b> terminates software access to the SmartMedia card. Must be executed before removing the card from the SmartMedia card slot to prevent data loss. Do not remove the card while the dot in the SmartMedia card icon flashes!</p>

# SW 700-102: Loadable Parameter Sets

Parameter setting/System control/Parameter sets

**Note:** Additional function SW 700-102 required.

Menu	Display	Saving parameter set on SmartMedia card
		<p><b>To save a parameter set on SmartMedia card</b></p> <ul style="list-style-type: none"><li>• Call up parameter setting</li><li>• System control</li><li>• Call up "Parameter sets" (Fig)</li></ul> <p>The analyzer provides 2 complete parameter sets (A, B). Up to 5 parameter sets can be loaded to the SmartMedia card. To do so, a parameter set (1, 2, 3, 4, or 5) of the SmartMedia card is overwritten by the device-internal parameter set A.</p> <ul style="list-style-type: none"><li>• Selecting the parameter set on the SmartMedia card</li></ul>  <pre>graph TD; SA[Set A] -.-&gt; SB[Set B (internal only)]; SA -.-&gt; S1[Set 1]; SA -.-&gt; S2[Set 2]; SA -.-&gt; S3[Set 3]; subgraph SmartMedia_card; S1; S2; S3; end</pre>

## Parameter set as file on a memory card:

Stored in "PARASET" folder, typical file name "1.SET".

# SW 700-102: Loadable Parameter Sets

Parameter setting/System control/Parameter sets

Menu	Display	Load parameter set from SmartMedia card
		<p><b>Loading a parameter set from SmartMedia card</b></p> <ul style="list-style-type: none"> <li>• Call up parameter setting</li> <li>• System control</li> <li>• Call up “Parameter sets” (Fig)</li> </ul>
		<p>The analyzer provides 2 complete parameter sets (A, B). 5 parameter sets can be stored on the SmartMedia card. One of those can be saved as parameter set A to the analyzer:</p>
		
		<ul style="list-style-type: none"> <li>• Select parameter set to be loaded. Activated parameter set is displayed in measuring mode.</li> </ul> <p>Note: Remote switching between A and B is possible via the OK2 input.</p>

# SW 700-106: Software Update

---

For a software update (additional function SW 700-106), the manufacturer supplies a specially formatted SmartMedia card. The analyzer replaces its own firmware (operating program) by the new version (“Update”).

## **Caution!**

During a software update the analyzer is not operable!  
After a software update you should check the configuration.

This icon indicates that a SmartMedia card is inserted in the slot. The card allows storing of current device software on the card as well as loading of new software into the analyzer.

1. Save the firmware currently installed in your analyzer (Pg 81)
2. Load the software update as described on Pg 82.

## **Notice:**

A memory card can be generated by formatting an update card (irreversible!). See introductory chapter to SmartMedia card.

# SMARTMEDIA Card: Save firmware

Parameter setting/System control/Software update/Save firmware

# Maintenance

BASE Module

**Note:** HOLD mode active

Menu	Display	Maintenance
	 <p>7.00 pH 22.3 °C</p> <p>Menu selection</p> <p>cal maint par diag</p> <p>Select: ◀ ▶ [enter]</p> <p>Return to meas Lingua</p> <p>Module BASE 700-021</p> <p>Current source</p> <p>Return</p>	<p><b>Call up Maintenance</b></p> <p>From the measuring mode: Press <b>menu</b> key to select menu. Select maintenance using arrow keys, confirm with <b>enter</b>. Then select "Module BASE".</p> <p><b>BASE module: Current source</b></p> <p>For testing purposes, the output current can be manually specified (range 0 ... 22 mA).</p> <p><b>Open/close memory card</b></p> <p>terminates software access to the SmartMedia card. Must be executed before removing the card from the SmartMedia card slot to prevent data loss.</p>

# Diagnostics Functions

## Overview

Selected diagnostics functions for quality management

### Diagnostics Functions (Quality Management, ISO 9000 et seq.)

To meet the quality management requirements to ISO 9000, the M 700 provides comprehensive diagnostics and safety functions such as Sensocheck sensor monitoring and CalCheck monitoring of calibration ranges, a logbook for time- and date-stamped recording of function activations, warning and failure messages. Further features are:

#### 2-Channel Measurement Recorder

Can be called up directly from the measuring mode. Allows detailed evaluation of events by placing the cursor on measured values of interest.

#### Sensor Network Diagram

(pH, O<sub>2</sub> modules, EC 400, sensor wear)  
Graphical representation of the sensor parameters in a network diagram – with slope, zero, reference impedance, glass impedance, response time, calibration timer, deviation from calibration range.

#### ServiceScope

(pH module)  
Displays the noise levels over the time. Allows distinction of individual disturbances, periodic and broadband disturbances, which is helpful for troubleshooting. An error message is generated if the noise level exceeds the failure limit.

Graphical indication of sensor condition

Sensocheck must have been activated during parameter setting

## Sensocheck - Sensor Monitoring

Module	Sensocheck function
O <sub>2</sub> :	Monitoring membrane/electrolyte
Cond/	Information on sensor condition
Cond Ind:	
pH/ORP/	Automatic monitoring of glass and
CO <sub>2</sub> :	reference electrode

The “smileys” provide information on wear and required maintenance of the sensor (“friendly” - “neutral” - “sad”).

Menu	Display	Activate Sensocheck
		<p><b>Open menu selection</b>                      Select parameter setting                      Enter passcode (Administrator)</p>
		<p>Select measuring module                      (e.g. “pH” or “O<sub>2</sub>”).                      Confirm with <b>enter</b></p>
		<p>Select “Sensor data”.                      Confirm with <b>enter</b>.                      Then select “Sensocheck Ref el”.                      (Fig.)                      Assign function and confirm with <b>enter</b>.</p>

# Diagnostics Functions

General status information of the measuring system

Select menu: Diagnostics - Logbook

Menu	Display	Diagnostics functions
		<p><b>Call up diagnostics</b></p> <p>From the measuring mode: Press <b>menu</b> key to select menu. Select diagnostics using arrow keys, confirm with <b>enter</b>.</p>
		<p>The “Diagnostics” menu gives an overview of all functions available. Functions which have been set as “Favorite” can be directly accessed from the measuring mode.</p> <p><b>Point of meas description</b></p> <p>Allows entering a tag number and a note. Select position: left/right arrow key, select character: up/down arrow key. Confirm the entry with <b>enter</b>.</p>
		<p><b>Logbook</b></p> <p>Shows the last 50 events with date and time, e.g. calibrations, warning and failure messages, power failure etc. This permits quality management documentation to ISO 9000 et seq. Extended logbook: SmartMedia card (SW 700-104)</p>

# SW 700-104: Extended Logbook

---

Parameter setting/System control/Logbook

## Additional Function SW 700-104: Extended Logbook

The extended logbook saves all entries in a file. The last 50 entries can be displayed on the M 700. A new file is generated for each month. The date is encoded in the file name.

Example for a file generated on SmartMedia card:

**\LOGBOOKL\_YYMM00.TXT**      Recorder data of YYMM  
(YY = year, MM = month)

The data is recorded as ASCII file with the extension .TXT.

The individual columns are separated by tabs. This makes the file readable with word processing or spreadsheet programs (e.g. Microsoft Excel). Each time the memory card is inserted in the slot, a "Device Info" consisting of Model number, BASE serial number, and tag number is written. Thus, a memory card can also be used to collect the logbook data of several devices. Example:

## M 700 - Logbook

No.	Time Stamp	Status	Message
<< Protos 3400 - Serial 0001760 [DSE KL_001] >>			
F226	21.04.07	19:08:43	Power supply Off
F227	22.04.07	06:02:01	Power supply On
F223	22.04.07	06:09:27	Diagnostics active
F225	22.04.07	06:09:36	Measurement active
B077	23.04.07	16:45:07 (x)	Fail current I2 > 20 mA
F222	23.04.07	18:43:11	Parameter setting active
F225	23.04.07	18:47:38	Measurement active
B077	23.04.07	18:47:38 ( )	Fail current I2 > 20 mA

No.	Message identifier
Time stamp:	Time stamp of logbook entry
Status	(x) - Message activated ( ) - Message deactivated
Message	Message text (in selected operator language)

Menu	Display	Diagnostics functions
 diag	 <p>7.00 pH 25.6°C</p> <p>Device description</p> <p>Module FRONT 700-011 Operating panel Hardware: 1, Software: 7.0 Serial number 0000815</p> <p>Module: FRONT BASE</p> <p>Return</p>	<p><b>Device description</b></p> <p>Provides information about all modules installed: Module type and function, serial number, hardware and software version and device options (Example: FRONT).</p>

# Setting Diagnostics Messages as Favorite

Select menu: Parameter setting/System control/Function control matrix

## Secondary Displays (1)

Here, additional values are displayed in the measuring mode according to the factory setting. When the respective softkey (2) is pressed, the process variables measured by the modules plus date or time are displayed. In addition, you can use the **softkeys (2)** to control functions.

To assign a function to a softkey, select

## Parameter setting/System control/ Function control matrix

- Function which can be controlled by softkeys:
- Parameter set selection
- Favorites
- EC 400 (fully automated probe controller)

## Favorites

Selected Diagnostics functions can be called up directly from the measuring mode using a softkey.

The table on the next page explains how to select favorites.

	ParSet	KI rec.	♥Av	EC 400
Input OK2	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	-
Left softkey	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	-
Right softkey	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	-
Profibus DO 2	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	-

Return      Connect

Example:  
"Favorites" to be selected with  
"Right softkey"

To select a softkey function:  
Select desired function  
using arrow keys,  
press "Connect" softkey  
and confirm with **enter**.

To deselect a function:  
Press "Disconnect" softkey,  
confirm with **enter**.

Menu	Display	Select favorites
		<p><b>Favorites menu</b></p> <p>Diagnostics functions can be called up directly from the measuring mode using a softkey. The “Favorites” are selected in the Diagnostics menu.</p>
		<p><b>Select favorites</b></p> <p>Press <b>menu</b> key to Menu selection. Select diagnostics using arrow keys, confirm with <b>enter</b>. Then select module and confirm with <b>enter</b>.</p>
		<p>Set/delete favorite:</p> <p>“Set favorite” allows activation of the selected diagnostic function directly from the measuring mode via softkey. The menu line is marked with a heart icon.</p>
		<p>Pressing the <b>meas</b> key returns to measurement. When the softkey has been assigned to “Favorites”, “Favorites menu” is read in the secondary display (see “Function control matrix”).</p>

### Notice:

When one of the softkeys has been assigned to the “Favorites menu” function, diagnostic functions which have been set as “Favorite” can be directly called up from the measuring mode.

# Diagnostics Functions

General status information of the measuring system

Select menu: Diagnostics - Message list

Menu	Display	Diagnostics functions
		<b>Call up diagnostics</b> From the measuring mode: Press <b>menu</b> key to select menu. Select diagnostics using arrow keys, confirm with <b>enter</b> .
		The "Diagnostics" menu gives an overview of all functions available. Functions which have been set as "Favorite" can be directly accessed from the measuring mode.
		<b>Message list</b> Shows the currently activated warning or failure messages in plain text. <b>Number of messages</b> When there are more than 7 messages, a vertical scrollbar appears. Scroll with the up/down arrow keys. <b>Message identifier</b> See message list for description. <b>Module identifier</b> Specifies the module that has generated the message.

## Specifications M 700(X)

Display*	LC graphic display, white backlighting
Resolution	240 x 160 pixels
Languages	German, English, French, Italian, Spanish, Swedish
Keypad	NAMUR keypad, individual keys, no double assignments [meas] [menu] [◀] [▲] [▼] [▶] [enter] [softkey 1] [softkey 2], NAMUR LEDs red and green.
Logbook	Recording of function activations, appearance and disappearance of warning and failure messages, with date and time
Storage capacity	Approx. 50 entries, without SmartMedia-Card read on display, recording on SmartMedia card
Extended logbook	> 50 000 entries, depending on free memory of SmartMedia card
Measurement recorder	2-channel measurement recorder with marking of events (failure, maintenance request, function check, limit values)
Recording medium	SmartMedia card
Recording capacity	> 50 000 entries, depending on free memory of SmartMedia card
Recording	Process variables and span selectable
Recording method	<ul style="list-style-type: none"><li>• Snapshot</li><li>• Min/Max value</li><li>• Average</li></ul>
Time base	<ul style="list-style-type: none"><li>• 10 s ... 10 h/pixel</li></ul>
Zoom function	<ul style="list-style-type: none"><li>• 10fold zoom in the event of high rate of change</li></ul>

\* Caution! Never expose the display to direct sun light! Only operate the display within the temperature range of 0 °C up to 50 °C max.

# Specifications

Pollution degree	2 (EN 61010-1)
Wire cross-section	2,5 mm <sup>2</sup>
Ground wire connection	2.5 mm <sup>2</sup> , M4 screw (EN 61010-1, 6..5.1.2.)
Sensor monitor	Direct display of measured values from sensor for validation
Protection against electric shock	Protective connection according to EN 61010-1, 6.5.1
Input OK 1 EEx ib IIC Function	Galv. separated (OPTO coupler) $V_i \leq 30$ V, floating, galvanic isolation up to 60 V Switches device to HOLD mode (user defined)
Switching voltage	0 ... 2 V AC/DC inactive      10 ... 30 V AC/DC active (invertible)
Input OK 2 EEx ib IIC Function	Galv. separated (OPTO coupler) $V_i \leq 30$ V, floating, galvanic isolation up to 60 V Switch-over to second parameter set
Switching voltage	0 ... 2 V AC/DC inactive      10 ... 30 V AC/DC active (invertible)
Current output I1 EEx ib IIC Load monitoring Overrange* Measurement error** Current source	0/4 ... 20 mA (22 mA), max. 10 V, galvanic isolation up to 60 V (galvanically connected with output I2) Error message if load is exceeded 22 mA in the case of a message < 0,2 % current value + 0.02 mA 0.00 ... 22.00 mA
Current output I2 EEx ib IIC	0/4 ... 20 mA (22 mA), max. 10 V, Galvanic isolation up to 60 V (galvanically connected with output I1)

# Specifications

---

Load monitoring	Error message if load is exceeded
Overrange *	22 mA in the case of a message
Measurement error **	< 0,2 % current value + 0.02 mA
Current source	0.00 ... 22.00 mA

---

Relay contacts *	4 relay contacts K1 ... K4, floating
EEx ib IIC	Galvanic isolation up to 60 V K1, K2, K3 connected on one side
Loadability	DC: < 30 V / < 500 mA, < 10 W
Usage *	K1 - K3, user definable for NAMUR maintenance request/ HOLD, limit value, parameter set B active, rinsing contact, USP contact, KI rec. active, Sensoface, controller alarm (EC 400) K4 permanently set as alarm contact (NAMUR failure)

---

## Enclosure

Assembly	M 700(X) C: Steel, coated M 700(X) S: Stainless steel, polished, 1.4305 <ul style="list-style-type: none"><li>• Wall mounting</li><li>• Post/pipe mounting</li><li>• Panel mounting</li><li>• Sealed against panel</li></ul>
Dimensions	See dimension drawing
Ingress protection	See dimension drawing
Cable glands	5 times M20 x 1.5
Terminals	Single wires and flexible leads up to 2.5 mm <sup>2</sup>
Weight	Approx. 3.2 kg plus approx. 150 g per module

\* User-defined

\*\* To IEC 746 Part 1, at nominal operating conditions

# Overview of Parameter Setting

## Parameter setting

Activated from measuring mode: Press **menu** key to select menu.

Select parameter setting using arrow keys, confirm with **enter**.

### Administrator level

Access to all functions, also passcode setting.

Releasing or blocking a function for access from the Operator level.

### Operator level

Access to all functions which have been released at the Administrator level. Blocked functions are displayed in gray and cannot be edited.

### Viewing level

Only display, no editing possible!

## System Control

### Memory card (Option)

- Record logbook
- Register recorder
- Decimal separator
- Card full
- Format

Menu only appears with SmartMedia Card inserted.

Make sure that it is a memory card, not an update card.

Commercially available SmartMedia cards must be formatted before they can be used as memory card.

### Copy configuration

The complete configuration of an analyzer can be written on a SmartMedia card. This allows transferring all device settings to other devices with identical equipment (exception: options and passcodes).

### Parameter sets

- Load
- Save

2 parameter sets (A,B) are available in the analyzer.

The currently active parameter set is read on the display.

Parameter sets contain all settings except:

Sensor type, Options, System control settings

Up to 5 parameter sets (1, 2, 3, 4, 5) are available when a SmartMedia card (Option) is used.

### Function control matrix

- Input OK2
- Left softkey
- Right softkey

Selecting the control element for the following functions:

- Parameter set selection

- KI recorder (Start/Stop)

- Favorites menu (selected diagnostics functions)

- EC 400 (fully automated probe controller)

### Time/date

Selecting the display format, entry

### Point of meas description

Can be called up in the diagnostics menu.

### Release of options

A TAN is required to release an Option.

### Software update

Software update from SmartMedia card (update card)

### Logbook

Selecting events to be recorded

### Buffer table

Entering own buffer set for automatic calibration

### Factory setting

Resetting all parameters to factory setting

### Passcode entry

Editing the passcodes

# Parameter Setting Menu

## Display Settings: FRONT Module

### Languages

Measurement display	Representation of measured values on the display:
<ul style="list-style-type: none"> <li>• Main display</li> <li>• Display format</li> <li>• Viewing angle</li> </ul>	<ul style="list-style-type: none"> <li>- Selecting the number of primary values displayed (one or two)</li> <li>- Decimal places</li> </ul>

Measurement recorder	Option: 2-channel, selection of process variable, start and end
<ul style="list-style-type: none"> <li>• Time base</li> <li>• Zoom function</li> <li>• Min/Max display</li> </ul>	

KI recorder	Option: See more detailed "Options" manual

## Signal Outputs and Inputs, Contacts: BASE Module

Output current I1, I2	2 current outputs, separately adjustable
-----------------------	--

- Variable
- Curve
- Output (0/4 - 20 mA)
- Output filter
- Behavior during messages
  - HOLD
  - Current meas.
  - Last meas. value
  - Fixed 22 mA
  - 22 mA message

Behavior during messages

Output current  
[mA]

Contact K4	NAMUR Failure
------------	---------------

- Contact type
- ON delay
- OFF delay

Contacts K3, K2, K1	Factory setting:
---------------------	------------------

- Usage
  - Maintenance request
  - HOLD (function check)
  - Limit value (adjustable)
  - Rinse contact (adjustable)
  - Parameter set B active
  - USP output
  - KI recorder active
  - Sensoface
  - Conoller alarm (alarm output EC 400)
  - Contact type / ON/OFF delay
- K3: Maintenance request, K2: HOLD, K1: Limit
- Variable, limit value, hysteresis, effective direction, ...
  - Rinsing interval, lead times, rinse duration, logbook entry, ...

Inputs OK1, OK2	Optocoupler - signal inputs
-----------------	-----------------------------

- OK1 usage
    - Signal level
- Off, HOLD (function check)  
active level switchable from 10 to 30 V or < 2 V, resp.  
For OK2 see System control/Function control matrix

# Glossary

---

## Technical Terms

### **Alarm limit**

For each process variable, you can define high and low warning and failure limits (NAMUR states: maintenance request, failure).

The alarm can be activated individually for each variable.

If an alarm limit is exceeded, an error message appears and the corresponding NAMUR contact is activated.

### **Calibration/adjustment passcode**

Protects access to calibration. Can be set or disabled at the Administrator level.

### **Cell factor**

Mechanical characteristic of electrodeless (toroidal) conductivity sensors.

### **Cleaning**

User-defined time during which the cleaning contact is closed during a rinsing cycle.

### **Controlled variable**

User-defined variable that acts on the controller.

### **Diagnostics menu**

Display of all relevant information on the device status.

### **Failure**

Alarm message and NAMUR contact. Failure means that the equipment no longer operates properly or that a process parameter has reached a critical value. Failure is disabled during "function check".

### **Feed time alarm**

Monitors the time during which the controller output is at 100 %.

### **Function check**

NAMUR contact. Always active when the unit does not output the configured measured value.

# Glossary

---

## Technical Terms

### **GLP/GMP**

Good Laboratory Practice / Good Manufacturing Practice:  
Rules for performance and documentation of measurements.

### **Interval**

The interval extends from the start of one rinsing cycle to the start of the next rinsing cycle, user defined.

### **Isothermal potential**

The isothermal intersection point is the point of intersection between two calibration lines at two different temperatures. The potential difference between the electrode zero point and this intersection point is the isothermal potential " $V_{ISO}$ ".

### **Limit contacts**

Are controlled by a user-definable process variable. The limit contact is activated if the measured value falls below or exceeds an alarm limit, depending on the user-defined effective direction.

### **Logbook**

The logbook shows the last 50 events with date and time, e.g. calibrations, warning and failure messages, power failure etc. This permits quality management documentation to ISO 9000 et seq.

Longer recordings are possible with the additional function "Extended logbook".

### **Main display**

Large measured-value display in the measuring mode. You can select which process variable is to be displayed.

### **Maintenance menu**

The Maintenance menu provides all functions for sensor maintenance and signal outputs.

# Glossary

---

## Technical Terms

### **Maintenance passcode**

Protects access to Maintenance. Can be set or disabled at the Administrator level.

### **Measuring mode**

When no menu function is activated, the unit is in measuring mode. The selected measured value is displayed. Pressing the meas key always returns you to the measuring mode.

### **Menu structure**

The M 700 provides a very clear menu structure. Menu selection is called up by pressing the menu key. Four basic functions can be accessed: Calibration, maintenance, parameter setting, diagnostics. From each of these functions, the individual module blocks (system control, FRONT module (display functions), BASE module (signal outputs)) can be accessed, as well as all added measuring and communication modules.

### **Message list**

The message list shows the number of currently activated messages and the individual warning or failure messages in plain text.

### **NAMUR**

German committee for measurement and control standards in the chemical industry

### **NAMUR contacts**

“HOLD (function check)”, “maintenance request”, and “failure”.  
Indicate status of measured variable and measuring system.

### **Operator level**

Menu level of the Parameter Setting menu. You can edit the device settings that have been enabled at the Administrator level.

# Glossary

---

## Technical Terms

### **Operator passcode**

Protects access to the Operator level. Can be set or disabled at the Administrator level.

### **Parameter Setting menu**

The Parameter Setting menu provides 3 access levels: Viewing, Operator, and Administrator level.

### **Passcode protection**

Access to the Calibration, Maintenance, Operator, and Administrator levels is protected by passcodes.

The passcodes can be defined or disabled at the Administrator level.

### **Point of measurement**

Can be defined to identify the unit and can be displayed in the Diagnostics menu.

### **Reference temperature**

With temperature compensation activated, the measured value is calculated to the value at the reference temperature (usually 20 oder 25 °C) using the temperature coefficient.

### **Second rinsing**

User-defined time during which the "Rinsing" contact is closed at the end of the rinsing cycle.

### **Secondary displays**

Two small displays located below the main display in measuring mode. The process variables to be displayed can be selected using the softkeys underneath.

### **Sensor coding**

Here, internal settings for electrodeless sensors are encrypted.

# Glossary

---

## Technical Terms

### **Slope**

The slope of an electrode is the voltage change per pH unit. For an ideal pH electrode, it lies at  $-59.2 \text{ mV/pH}$  ( $25 \text{ }^\circ\text{C}$ ).

### **Viewing level**

Menu level of the Parameter Setting menu. Display of all device settings, however no editing possible.

### **Zero**

The zero point refers to the voltage delivered by an electrode at  $25 \text{ }^\circ\text{C}$  and  $\text{pH} = 7.00$ . For an ideal pH electrode, it lies at  $0 \text{ mV}$ . In practice, the real zero point is slightly different.
