Transmitter Cond Ind 7100e/2(X)H

70098

**METTLER**

**TOLEDO**

## **Warranty**

Defects occurring within 1 years from delivery date shall be remedied free of charge at our plant (carriage and insurance paid by sender).

Subject to change without notice.

## **Return of products under warranty**

Please contact METTLER TOLEDO's Customer Service Dept. before returning a defective device. Ship the cleaned device to the address you have been given. If the device has been in contact with process fluids, it must be decontaminated/disinfected before shipment. In that case, please attach a corresponding certificate, for the health and safety of our service personnel.

## **Disposal**

Please observe the applicable local or national regulations concerning the disposal of "waste electrical and electronic equipment".

## Safety information

### **Be sure to read and observe the following instructions!**

The device has been designed using state of the art technologies and it complies with the applicable safety regulations. When operating the device, certain conditions may nevertheless lead to danger for the operator or damage to the device.

#### **Caution!**

Commissioning may only be carried out by trained experts. Whenever it is likely that protection has been impaired, the device shall be made inoperative and secured against unintended operation.

The protection is likely to be impaired if, for example:

- the device shows visible damage
- the device fails to perform the intended measurements
- after prolonged storage at temperatures above 70 °C
- after severe transport stresses

Before recommissioning the device, a professional routine test in accordance with EN 61010-1 must be performed. This test should be carried out by the manufacturer.

#### **Caution!**

Before commissioning it must be proved that the device may be connected with other equipment.

# Safety information

## Safety precautions for installation

- The stipulations of EN 60079-10 / EN 60079-14 must be observed during commissioning.
- The **Transmitter Cond Ind 7100e/2H** is approved for measurements in FM Class 1 Div 2.
- The **Transmitter Cond Ind 7100e/2XH** is approved for operation in the following locations: ATEX, FM Zone 1 with measurement in Zone 0, and FM Class I Div 1.

## Connection to supply units

- **Transmitter Cond Ind 7100e/2H:** Before connecting this device to a supply unit, make sure that its output voltage cannot exceed 30 V DC. Do not use alternating current or mains power supply!
- **Transmitter Cond Ind 7100e/2XH:** This device may only be connected to an explosion-proof power supply unit (for input ratings refer to annex of EC-Type-Examination Certificate). Before commissioning it must be made sure that the connections to other equipment such as power supply unit and cables are intrinsically safe.

Terminals:

suitable for single wires / flexible leads up to 2.5 mm<sup>2</sup> (AWG 14)

## Note for cleaning in a hazardous location

In hazardous locations the transmitter may only be cleaned with a damp cloth to prevent electrostatic discharge.

## Intended use

The Transmitter Cond Ind 7100e/2(X) is used for measurement of electrical conductivity and temperature in liquids in the field of biotechnology, chemical and pharmaceutical industry, pulp and paper, as well as industry, environment, food processing, and sewage treatment.

The rugged molded enclosure can be wall or pipe mounted or fixed into a control panel.

The protective hood provides additional protection against direct weather exposure and mechanical damage.

The transmitter has been designed for application with electrodeless sensors, particularly for the sensors of the InPro 7250 series.

- The **Transmitter Cond Ind 7100e/2H** is approved for measurements in FM Class 1 Div 2.
- The **Transmitter Cond Ind 7100e/2XH** is approved for operation in the following locations: ATEX, FM Zone 1 with measurement in Zone 0, and FM Class I Div 1.

## Conformity with FDA 21 CFR Part 11

In their directive "Title 21 Code of Federal Regulations, 21 CFR Part 11, Electronic Records; Electronic Signatures" the US American health agency FDA (Food and Drug Administration) regulates the production and processing of electronic documents for pharmaceutical development and production. This results in requirements for measuring devices used for corresponding applications. The following features ensure that the measuring devices of the Transmitter Cond Ind 7100e/2(X)H Series meet the demands of FDA 21 CFR Part 11:

### **Electronic Signature**

Access to the device functions is regulated and limited by individually adjustable codes – "Passcodes" (for Passcode Editor see Page 56, overview of factory settings on back of manual). This prevents unauthorized modification of device settings or manipulation of the measurement results. Appropriate use of these passcodes makes them suitable as electronic signature.

### **Audit Trail**

Every (manual) change of device settings can be automatically documented. For that purpose, each change is marked by a "Configuration Change Flag", which can be interrogated and documented via HART communication. Then the changed device settings/parameters can also be retrieved and documented via HART communication.

# EC-Type-Examination Certificate

## Translation

(1)

## EC-TYPE EXAMINATION CERTIFICATE

- (2) Equipment or Protective System intended for use in potentially explosive atmospheres - Directive 94/9/EC  
(3) EC-Type Examination Certificate Number

## TÜV 99 ATEX 1434

- (4) Equipment or Protective System: transmitter type Cond I7100/2X\*  
(5) Manufacturer: Mettler Toledo GmbH  
(6) Address: CH-Urdorf, Im Hackaker 15  
(7) This equipment or protective system and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.  
(8) The TÜV Hannover/Sachsen-Anhalt e.V., TÜV Certification Body N° 0032 in accordance with Article 9 of the Council Directive 94/9/EC of March 23, 1994, certifies that this equipment or protective system has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres given in Annex II to the Directive.

The examination and test results are recorded in confidential report N° 99/PX10691.

- (9) Compliance with the Essential Health and Safety Requirements has been assured by compliance with:

EN 50 014:1997

EN 50 020:1994

- (10) If the sign "X" is placed after the certification number, it indicates that the equipment or protective system is subject to special conditions for safe use specified in the schedule to this certificate.  
(11) This EC-TYPE EXAMINATION CERTIFICATE relates only to the design and construction of the specified equipment or protective system. If applicable, further requirements of this Directive apply to the manufacture and supply of this equipment or protective system.  
(12) The marking of the equipment or protective system shall include the following:

(13)

**S C H E D U L E****(14) EC-TYPE EXAMINATION CERTIFICATE N° TÜV 99 ATEX 1434****(15) Description of equipment or protective system**

The transmitter type Cond I7100/2X\* is used for the recognition and processing of electrochemical quantities.

The maximum permissible ambient temperature is 55°C.

**Electrical data**

Current loop..... in type of protection "Intrinsic Safety" EEx ib IIC  
 (terminals 10, 11) only for the connection to a certified intrinsically safe circuit with  
 the following maximum values:

$$\begin{aligned}U_i &= 30 \text{ V} \\I_i &= 100 \text{ mA} \\P_i &= 0.8 \text{ W}\end{aligned}$$

$$\begin{aligned}\text{effective internal capacitance } C_i &= 20 \text{ nF} \\ \text{effective internal inductance } L_i &= 0.2 \text{ mH}\end{aligned}$$

Conductivity measuring loop..... in type of protection "Intrinsic Safety" EEx ia IIC resp. EEx ib IIC  
 (terminals 1, 2, 3, 4, 5) Maximum values:

$$\begin{aligned}U_o &= 7.5 \text{ V} \\I_o &= 63 \text{ mA} \\P_o &= 80 \text{ mW} \\R &= 80 \Omega\end{aligned}$$

Characteristic: linear  
 effective internal capacitance  $C_o = 3 \text{ nF}$   
 The effective internal inductance is negligibly small.

$$\begin{aligned}\text{max. permissible external capacitance } C_o &= 11.1 \mu\text{F} \\ \text{max. permissible external inductance } L_o &= 9 \text{ mH}\end{aligned}$$

or

for the connection to the electrodeless conductivity sensor type  
 SE654 X resp. type 871EC-SPO  
 Maximum cable length: 30 m

Temperature measuring loop.... in type of protection "Intrinsic Safety" EEx ia IIC  
 (terminals 7, 8) Maximum values:

$$\begin{aligned}U_o &= 5 \text{ V} \\I_o &= 3.5 \text{ mA} \\P_o &= 5 \text{ mW} \\R &= 1590 \Omega\end{aligned}$$

Characteristic: linear  
 effective internal capacitance  $C_o = 250 \text{ nF}$   
 The effective internal inductance is negligibly small.

max. permissible external capacitance  $C_o = 100 \mu F$   
max. permissible external inductance  $L_o = 1 H$

EP for the connection to the equipotential bonding system  
(Terminal 9)

The current loop is safely separated from the conductivity measuring loop and the temperature measuring loop up to a voltage of 60 V. The conductivity measuring loop and the temperature measuring loop are galvanically connected.

(16) Test documents are listed in the test report No. 99/PX10691.

(17) Special condition for safe use

none.

(18) Essential Health and Safety Requirements

no additional ones

# 1. Supplement to EC-Type-Examination Certificate

## Translation

### 1. SUPPLEMENT to

#### EC-TYPE EXAMINATION CERTIFICATE No. TÜV 99 ATEX 1434

Equipment: transmitter type Cond Ind 7100e/2X\*  
 Manufacturer: Mettler Toledo GmbH  
 Address: CH-8902 Urdorf  
 Im Hackacker 15

In the future, the transmitter type CondInd 7100/2X\* may also be operated according to the test documents listed in the test report.

The changes refer to the electrical data of the transmitter as well as to the type designation.  
 For the transmitter according to this 1. supplement this reads: Cond Ind 7100e/2X\*.

#### Electrical data

Conductivity measuring loop ..... in type of protection "Intrinsic Safety" EEx ia IIC  
 (terminals 1, 2, 3, 4, 5, 6) Maximum values:  
 $U_o = 8 \text{ V}$   
 $I_o = 99 \text{ mA}$   
 $P_o = 124 \text{ mW}$   
 $R_o = 50.7 \Omega$   
 Characteristic: linear  
 effective internal capacitance  $C_i = 3 \text{ nF}$   
 The effective internal inductance is negligibly small.  
 max. permissible external capacitance  $C_o = 8.4 \mu\text{F}$   
 max. permissible external inductance  $L_o = 4 \text{ mH}$

Temperature measuring loop ..... in type of protection "Intrinsic Safety" EEx ia IIC:  
 (terminals 7, 8) Maximum values:  
 $U_o = 5 \text{ V}$   
 $I_o = 3.5 \text{ mA}$   
 $P_o = 5 \text{ mW}$   
 $R_o = 1590 \Omega$   
 Characteristic: linear  
 effective internal capacitance  $C_i = 250 \text{ nF}$   
 The effective internal inductance is negligibly small.  
 max. permissible external capacitance  $C_o = 100 \mu\text{F}$   
 max. permissible external inductance  $L_o = 1 \text{ H}$

**1. Supplement to EC-Type Examination Certificate No. TÜV 99 ATEX 1434**

Conductivity/temperature  
measuring loop ..... in type of protection "Intrinsic Safety" EEx ia IIC  
(terminals 1, 2, 3, 4, 5, 6, 7, 8) Maximum values:  
 $U_e = 8 \text{ V}$   
 $I_e = 102.5 \text{ mA}$   
 $P_c = 129 \text{ mW}$   
 $R_i = 49.1 \Omega$   
Characteristic: linear  
effective internal capacitance  $C_i = 250 \text{ nF}$   
The effective internal inductance is negligibly small.  
max. permissible external capacitance  $C_o = 8.4 \mu\text{F}$   
max. permissible external inductance  $L_o = 4 \text{ mH}$

The conductivity measuring loop and the temperature measuring loop are galvanically connected.

The transmitters type Condil 7100/2X<sup>+</sup> and type Cond Ind 7100e/2X<sup>+</sup> also meet the requirements of  
EN 50 014:1997 +A1+A2 EN 50 020:2002

All other details remain unchanged for this 1. supplement.

(16) The test documents are listed in the test report N° 05 YEX 552150.

(17) Special conditions for safe use  
none

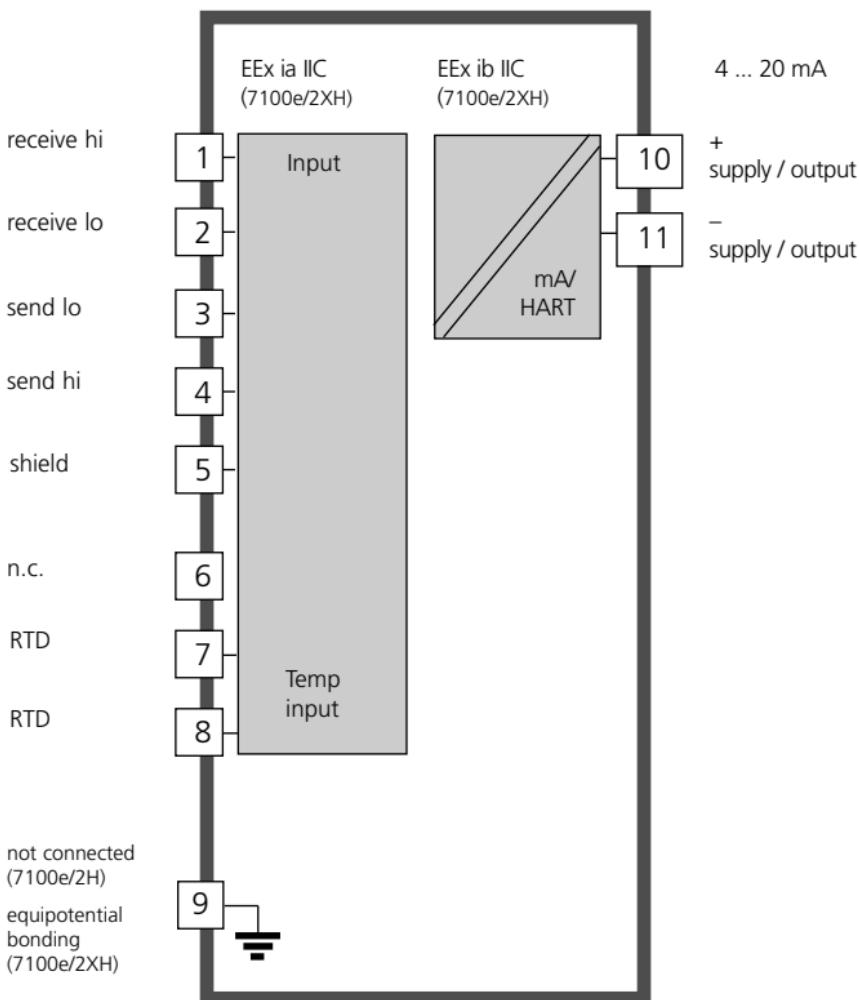

(18) Essential Health and Safety Requirements  
no additional ones

# Assembly

## Package contents

Check the shipment for transport damage and completeness.  
The package should contain:

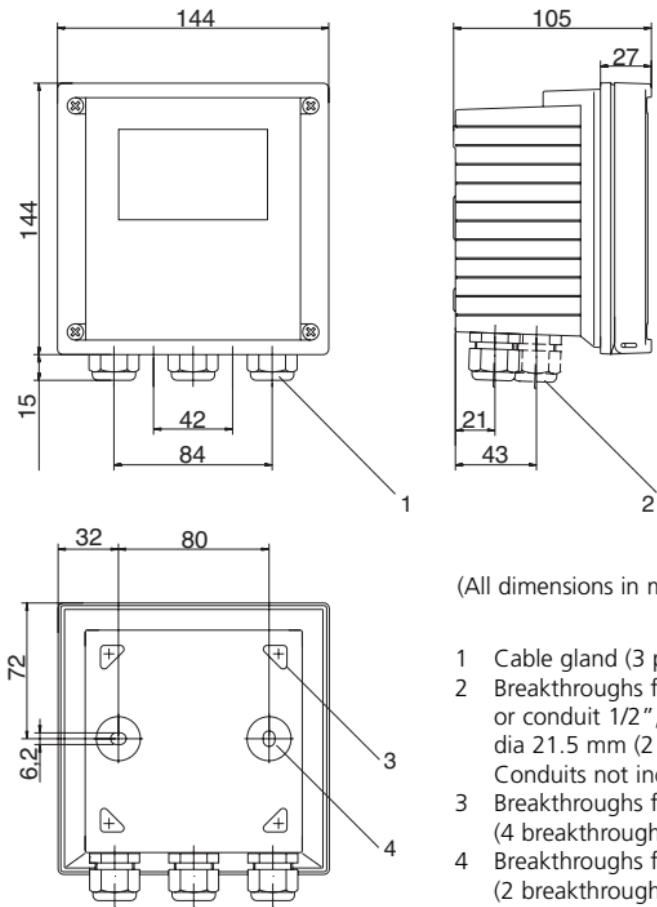

- Front unit
- Lower case
- Bag containing small parts
- Instruction manual
- Specific test report

- |  |  |
|--|--|
| 1 Jumper (2 piece)   | 6 Sealing inserts (1 piece)  |
| 2 Washer (1 piece), for conduit<br>mounting: place washer between<br>enclosure and nut | 7 Rubber reducer (1 piece)   |
| 3 Cable ties (3 pieces)  | 8 Cable glands (3 pieces)  |
| 4 Hinge pin (1 piece), insertable from<br>either side                                  | 9 Filler plugs (3 pieces)  |
| 5 Enclosure screws (4 pieces)  | 10 Hexagon nuts (5 pieces)   |
|  | 11 Sealing plugs (2 pieces),<br>for sealing in case of wall mounting |

Fig.: Assembling the enclosure

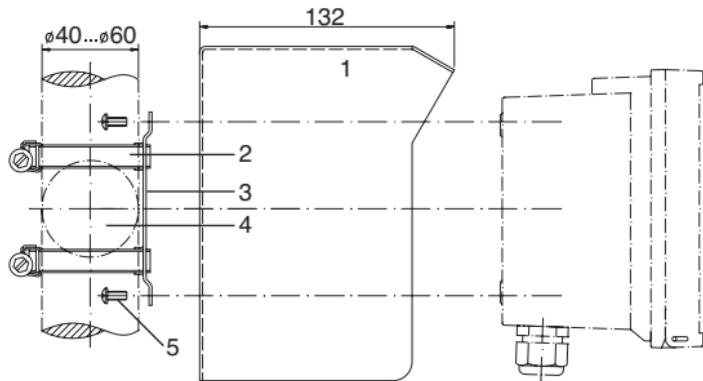

## Mounting plan

- 1 Cable gland (3 pieces)
- 2 Breakthroughs for cable gland or conduit 1/2", dia 21.5 mm (2 breakthroughs)  
Conduits not included!
- 3 Breakthroughs for pipe mounting (4 breakthroughs)
- 4 Breakthroughs for wall mounting (2 breakthroughs)

Fig.: Mounting plan

## Pipe mounting, panel mounting

- 1 Protective hood (if required)
- 2 Hose clamps with worm gear drive to DIN 3017 (2 pieces)
- 3 Pipe-mount plate (1 piece)
- 4 For vertical or horizontal posts or pipes
- 5 Self-tapping screws (4 pieces)

(All dimensions in mm)

Fig.: Pipe-mount kit

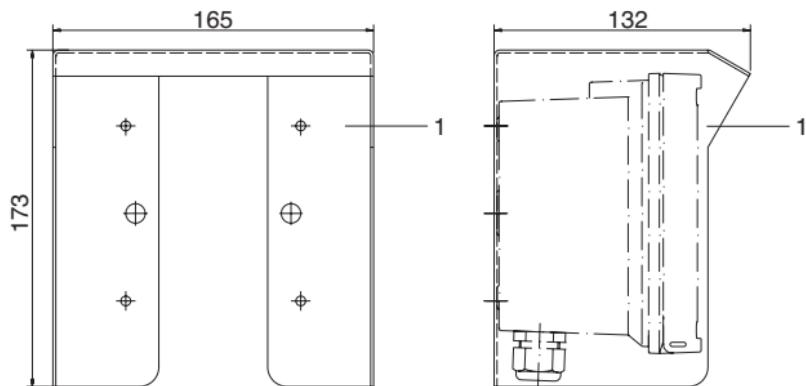

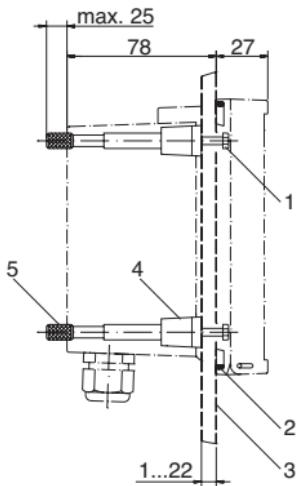

Fig.: Protective hood for wall and pipe mounting

- 1 Screws (4 pieces)
- 2 Gasket (1 piece)
- 3 Panel
- 4 Span pieces (4 pieces)
- 5 Threaded sleeves (4 pieces)

Panel cutout 138 x 138 mm  
(DIN 43700)

(All dimensions in mm)

Fig.: Panel-mount kit

# **Installation and connection**

## **Information on installation**

- Installation may only be carried out by trained experts in accordance with this instruction manual and as per applicable local and national codes.
- Be sure to observe the technical specifications and input ratings.
- Be sure not to notch the conductor when stripping the insulation.
- When commissioning, a complete configuration must be carried out by the system administrator.

## **Connection to supply units**

- **Transmitter Cond Ind 7100e/2H:** Before connecting this device to a supply unit, make sure that its output voltage cannot exceed 30 V DC. Do not use alternating current or mains power supply!
- **Transmitter Cond Ind 7100e/2XH:** This device may only be connected to an explosion-proof power supply unit (for input ratings refer to annex of EC-Type-Examination Certificate).

**Terminals:** suitable for single wires / flexible leads up to 2.5 mm<sup>2</sup> (AWG 14)

## **Warning!**

Additional safety precautions have to be taken for applications in hazardous locations to CSA!  
(See Pg 97 et seq.)

## **Division 2 wiring**

The connections to the transmitter must be installed in accordance with the National Electric Code (ANSI-NFPA 70) Division 2 hazardous (classified) location non-incendive wiring techniques.

**FM Control Drawing:** Refer to page 94.

➔	Cal Info, display of cell factor and zero point
➔	Error Info: Display of last error message
+	Start GainCheck device self-test

## Safety functions

### **Sensocheck, Sensoface sensor monitoring**

Sensocheck continuously monitors the sensor and lines. The primary and its lines are monitored for short circuit and the secondary and its lines are monitored for open circuit. Sensocheck can be switched off (Configuration, Pg 55).

Sensoface provides information on the conductivity sensor condition.

### **GainCheck device self-test**

A display test is carried out, the software version is displayed and the memory and measured value transfer are checked.

Start GainCheck device self test: +

### **Automatic device self-test**

The automatic device self-test checks the memory and measured-value transfer. It runs automatically in the background at fixed intervals.

# Safety functions

## Hold mode

Display:  HOLD

The Hold mode is a safety state during configuration and calibration. The loop current is frozen (Last) or set to a fixed value (Fix).

If the calibration or configuration mode is exited, the transmitter remains in the Hold mode for safety reasons. This prevents undesirable reactions of the connected peripherals due to incorrect configuration or calibration. The measured value and "HOLD" are displayed alternately. The transmitter only returns to measuring mode after **enter** is pressed and 20 seconds have passed.

Configuration mode is also exited automatically 20 minutes after the last keystroke (timeout). The transmitter returns to measuring mode.

Timeout is not active during calibration.

Behavior of output signal:

Last: The loop current is frozen at its last value.  
Recommended for short configuration procedures.  
The process should not change decisively during configuration. Changes are not noticed with this setting!

Fix: The loop current is set to a value that is noticeably different from the process value in order to signal the control system that the transmitter is being worked at.  
See Configuration, Pg 51.

## Outputs

### **Current output / Loop current**

The loop current is controlled by the process variable selected in the configuration.

The current start and end can be set to represent any desired value. To check connected peripherals (e.g. limit switches, controllers), the loop current can be manually specified (see Pg. 41).

### **HART communication**

The Transmitter Cond Ind 7100e/2(X) can be remote-controlled via HART communication. It can be configured using a hand-held terminal or from the control room. Measured values, messages and device identification can be downloaded at any time. This allows easy integration also in fully automatic process cycles.

A list of the HART commands can be found in the "Transmitter Cond Ind 7100e/2(X) Transmitter-Specific Command Specification": [www.mtpro.com/transmitters](http://www.mtpro.com/transmitters).

### **Alarm**

The alarm delay is configurable.

Error messages can also be signaled by a 22 mA loop current (see Configuration, Pg 55).

The alarm LED on the front panel can be configured as follows:

HOLD off:            Alarm: LED flashing

HOLD on:            Alarm: LED on. HOLD: LED flashing.

# Passcodes (factory setting)

The passcodes allow fast access to the functions

## Calibration

Key+passcode	Description	Page
 0000	<b>Cal Info</b>	71
 1001	<b>Zero calibration</b>	66
 1100	<b>Calibration:</b> Entry of cell factor	60
 0110	<b>Calibration:</b> Calibration solution	62
 1105	<b>Product calibration</b>	64
 1015	<b>Temp probe adjustment</b>	70

## Configuration

Key+passcode	Description	Page
 0000	<b>Error Info</b> Display last error and erase	74
 1200	<b>Configuration</b>	34
 2222	<b>Sensor monitor</b> Display resistance and temp	71
 5555	<b>Current source</b> Specify output current	72

## Passcode editor

Key+passcode	Description	Page
 1989	<b>Administrator passcode</b> Changing the passcodes	56

# Configuration

In the Configuration mode you set the device parameters.

Activate

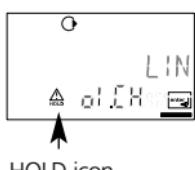

Activate with **conf**

Enter passcode "1200"\*.  
Edit parameter with ▶ and ▲,  
confirm/continue with **enter**.  
(End with **conf**, then **enter**.)

Hold

HOLD icon

During configuration the transmitter remains in the Hold mode for reasons of safety. The loop current is frozen (at its last value or at a preset fixed value, depending on the configuration), Sensoface is off, mode indicator "Configuration" is on.

Input errors

The configuration parameters are checked during the input. In the case of an incorrect input "Err" is displayed for approx. 3 sec. The incorrect parameters cannot be stored.  
Input must be repeated.

End

End with **conf**. The measured value and Hold are displayed alternately, "**enter**" flashes. Press **enter** to end the Hold mode. The measured value is displayed. The output current remains frozen for another 20 s (HOLD icon on, "hourglass" flashes).

\* Factory setting, for passcode editing, see Pg 56

## Menu structure of configuration

The configuration steps are assigned to different menu groups:

- Current output (code: o1.)
- Temperature compensation (code: tc.)
- Alarm settings (code: AL.)

With the arrow keys you can jump between the individual menu groups.  
Each menu group contains menu items for setting the parameters.

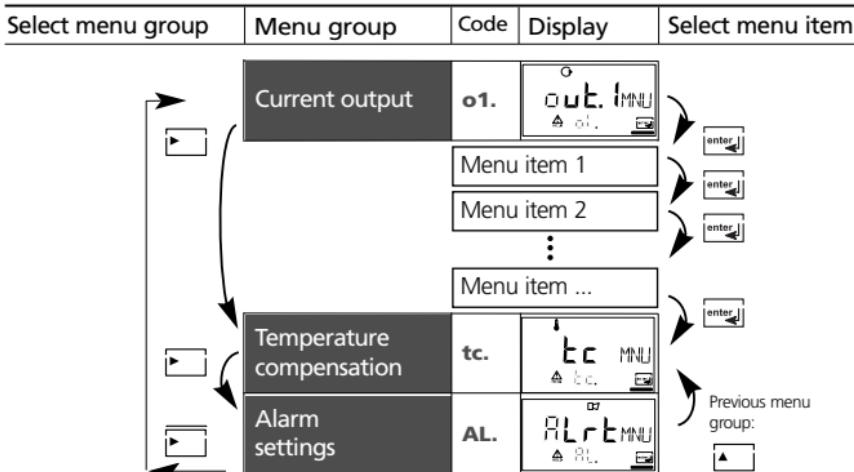

Example:

"o1." is displayed with all menu items of the "Current output" menu group.

Pressing **enter** accesses the submenus. The values are edited using the arrow keys. Pressing **enter** confirms/stores the settings.

Return to measurement: Press **conf**. Press **enter** to confirm safety prompt.  
After 20 sec the transmitter will be in measuring mode again.

# Overview of configuration steps

Code	Menu	Selection / Default
<b>out1</b>	<b>Current output</b>	<b>(Factory setting bold print)</b>
o1.SnSR	Sensor selection Only with Other:	<b>7250 IPR</b> , Other
o1.CELL	Entry of cell factor	<b>2.175</b> (00.100...20.000)
o1.SFC	Enter transfer ratio	<b>120.00</b> (001.00...200.00)
o1.rTD	Select temperature probe	Pt100/ <b>Pt1000</b> /NTC100/NTC30
o1.UniT	Select measured variable	<b>mS/cm</b> , S/m, SAL, %
o1.CoNC	Select solution Codes: -01- to —10- see Pg 42	<b>NaCl</b> <b>-01-</b> Codes -02- ... -10-

\*Ranges: see Pg 82 and the following

## Concentration measurement

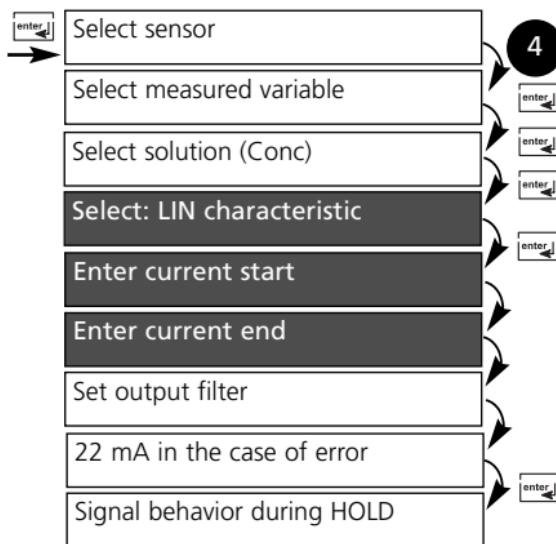

For the solutions listed above, the transmitter can determine the substance concentration from the measured conductivity and temperature values in % by wt. The measurement error is made up of the sum of measurements errors during conductivity and temperature measurement and the accuracy of the concentration curves stored in the transmitter (see Pg 88 et seq.). We recommend to calibrate the transmitter together with the sensor, preferably in the same conductivity range as measured later. For exact temperature measurement, you should perform a temperature probe adjustment. For measuring processes with rapid temperature changes, a separate temperature probe with fast response should be used.

# Configuration

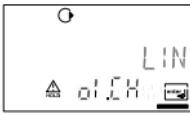

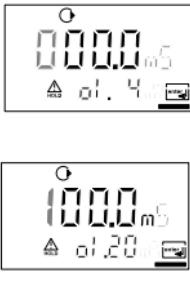

## Output current. LIN characteristic. Current start/end

1. Press **conf** key.
2. Enter passcode **1200\***.
3. Select **Current output** menu group using arrow keys.  
All items of this menu group are indicated by the code "01."
4. Press **enter** to select menu, edit with arrow keys (see Pg 45). Confirm (and proceed) with **enter**.
5. End: Press **conf**, then **enter**

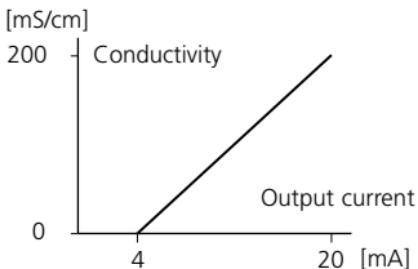

\* Factory setting

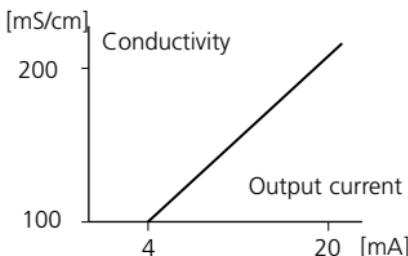

Code	Display	Action	Choices
<b>o1.</b>		Select output characteristic Select with ► arrow key Proceed with <b>enter</b> (Step omitted for % (Conc) or SAL)	<b>LIN</b> (LIN / LOG)
		With LIN selected: <ul style="list-style-type: none"> <li>Enter current start (lower end of scale).</li> </ul> Select with ► key, edit number with ▲ key, proceed with <b>enter</b> . <ul style="list-style-type: none"> <li>Enter current end (upper end of scale).</li> </ul> Proceed with <b>enter</b>	<b>000.0 mS</b> (xxx.x mS)  <b>100.0 mS</b> (xxx.x mS)

### Assignment of measured values: Current start and current end

Example 1: Range 0...200 mS/cm

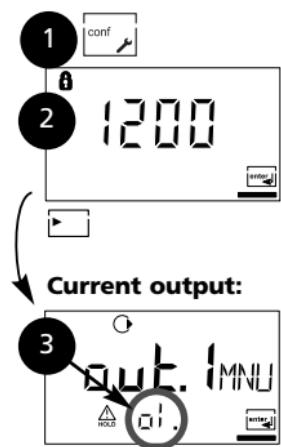

Example 2: Range 100...200 mS/cm  
Advantage: Higher resolution in range of interest

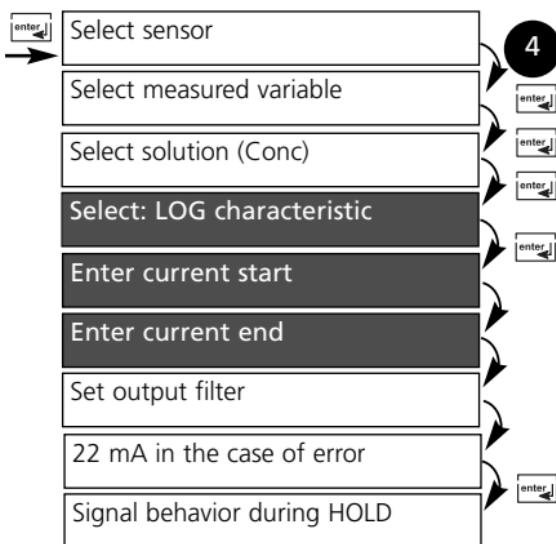

# Configuration

## Output current. LOG characteristic. Current start / end

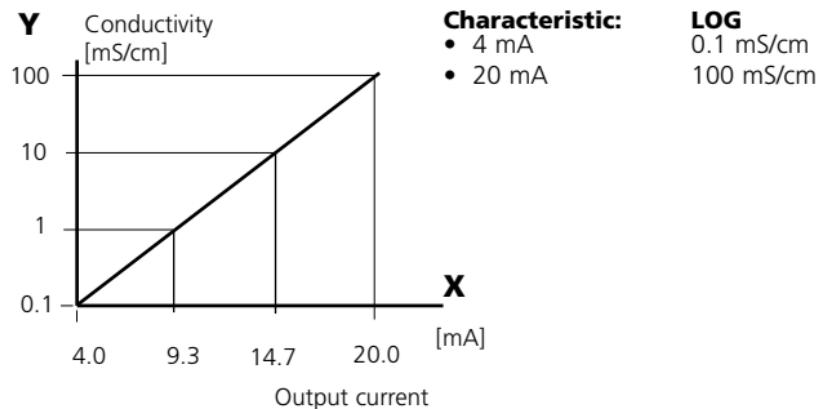

1. Press **conf** key.
2. Enter passcode **1200\***.
3. Select **Current output** menu group using arrow keys.  
All items of this menu group are indicated by the code "01."
4. Press **enter** to select menu, edit with arrow keys (see Pg 47). Confirm (and proceed) with **enter**.
5. End: Press **conf**, then **enter**

\* Factory setting

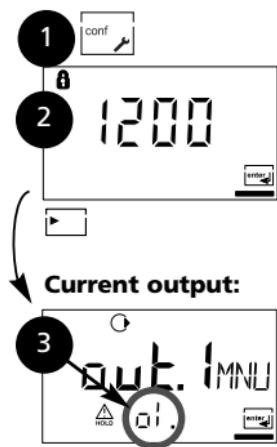

Code	Display	Action	Choices
<b>o1.</b>		With <b>LOG</b> selected not with % (Conc) or SAL): <ul style="list-style-type: none"> <li>Enter lower end of scale  (=current start)</li> </ul> Select with <b>►</b> key, edit number with <b>▲</b> key, proceed with <b>enter</b> .	<b>0.1 mS</b> (0.001 mS 0.01 mS 0.1 mS 1.0 mS 10 mS 100 mS 1000 mS)
		<ul style="list-style-type: none"> <li>Enter upper end of scale  (=current end)</li> </ul> Select with <b>►</b> key, edit number with <b>▲</b> key.  Proceed with <b>enter</b>	<b>100 mS</b> (0.001 mS 0.01 mS 0.1 mS 1.0 mS 10 mS 100 mS 1000 mS)

### Example: Measurement range over 3 decades

Code	Display	Action	Choices
<b>o1.</b>		Time constant of output filter Default setting: 0 s (inactive). To specify a time constant: Select with ▶ key, edit number with ▲ key, proceed with <b>enter</b>	<b>0 sec</b> 0 ... 120 sec

### Time constant of output filter (attenuation)

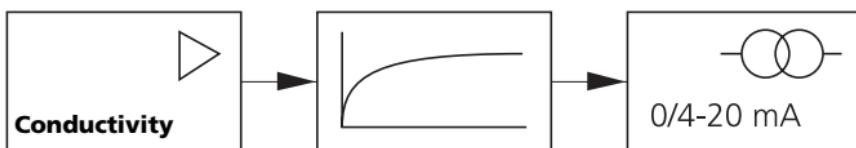

To smoothen the current output, a low-pass filter with adjustable filter time constant can be switched on. When there is a jump at the input (100 %), the output level is at 63 % after the time constant has been reached.

The time constant can be set from 0 to 120 sec.

If the time constant is set to 0 s, the current output follows the input.

**Note:**

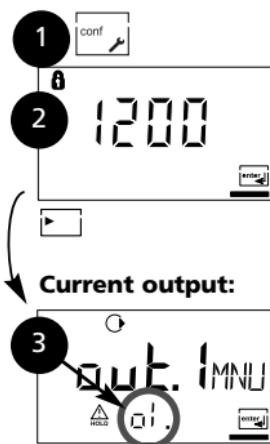

The filter only acts on the current output, not on the display!

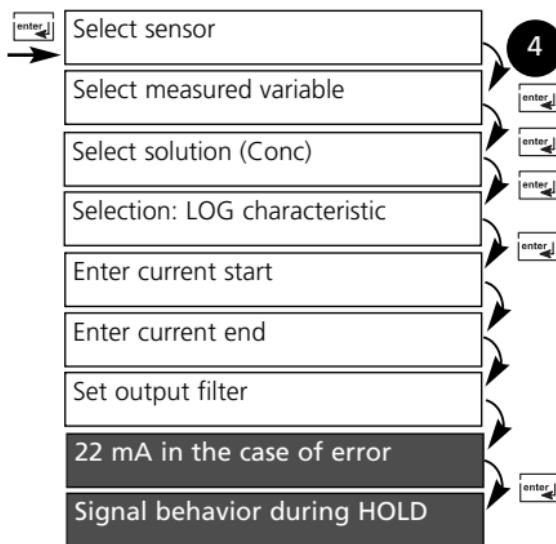

Time constant 0 to 120 sec

# Configuration

## Output. Output current during Error and HOLD.

1. Press **conf** key.

	<b>"YES"</b> <b>enter</b> = take over new passcode Cancel: <b>conf</b> = old passcode	

# Calibration

Calibration adjusts the device to the sensor.

Activate

Activate with **cal**

Enter passcode\*:

- Entry of cell factor 1100
- With calibration solution 0110
- Product calibration 1105
- Zero point 1001
- Temp probe adjustment 1015

Select with **▶** key, edit number with **▲** key, proceed with **enter** key  
(End with **cal**, then **enter**.)

Hold

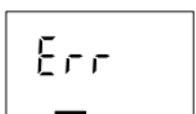

During calibration the transmitter remains in the Hold mode.

The loop current is frozen (at its last value or at a preset fixed value, depending on the configuration), Sensoface is off, mode indicator "Calibration" is on.

Input errors

The calibration parameters are checked during the input. In the case of an incorrect input "Err" is displayed for approx. 3 sec. The incorrect parameters cannot be stored. Input must be repeated.

End

End with **cal**.

## Safety prompt:

The measured value and Hold are displayed alternately, "**enter**" flashes. Press **enter** to end the Hold mode. The measured value is displayed. The output current remains frozen for another 20 sec (HOLD icon on, "hourglass" flashes).

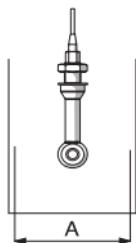

\* Factory setting, for passcode editing, see Pg 56

## Information on calibration

Calibration can be performed by:

- Entry of cell factor
- Determining the cell factor with a known calibration solution taking account of the temperature
- Product calibration
- Zero calibration in air or with calibration solution
- Temperature probe adjustment

### Note:

If measurements are taken in containers with  $A < 110$  mm, be sure to choose a container with the same cross-section and the same material (metal/plastic) for calibration.

### Caution

- All calibration procedures must be performed by trained personnel. Incorrectly set parameters may go unnoticed, but change the measuring properties.
- When another sensor is used, its sensor data (cell factor, transfer ratio, measuring frequency, temperature probe) must be entered in the configuration menu before calibration.
- Each time a new sensor is connected, the transmitter must be calibrated.

# Calibration by input of cell factor

Input of cell factor with simultaneous display of conductivity and temperature (without temperature compensation)

Display	Action	Remark
	Press <b>cal</b> key, enter code 1100*. Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>enter</b> .	If an invalid code is entered, the transmitter returns to measuring mode.
	Ready for calibration  Dismount and clean sensor	Display (3 sec) Transmitter in Hold mode, measured value frozen. Sensoface inactive.
	Enter cell factor: Select with <b>▶</b> key, edit number with <b>▲</b> key. Conductivity and temperature are alternately displayed during the input (lower display). Confirm entry with <b>enter</b> .	
	The entered cell factor and zero point are displayed. Confirm with <b>enter</b> .	

\* Factory setting

Display	Action	Remark
	<p>Conductivity and temperature are displayed.</p> <p>The measured value is shown in the main display alternately with "Hold"; "enter" flashes.</p> <p>Press <b>enter</b> to end calibration.</p>	<p>Safety prompt After end of calibration, the outputs remain in Hold mode for approx. 20 sec.</p>

# Calibration with calibration solution

Be sure to use known calibration solutions and the respective temperature-corrected conductivity values (see Calibration solutions Pg86).

During the calibration procedure the temperature should be kept constant.

Display	Action	Remark
	Press <b>cal</b> key, enter code 0110* Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>enter</b> .	If an invalid code is entered, the trans- mitter returns to measuring mode.
	Ready for calibration  Dismount and clean sensor	Display (3 sec) Transmitter in Hold mode, measured value frozen. Sensoface inactive.
	Immerse sensor in calibration solution.  Enter the temperature-corrected conductivity value of the calibration solution:  Select with <b>▶</b> key, edit number with <b>▲</b> key. Cell factor and temperature are alternately displayed in the lower display.  Confirm entry with <b>enter</b> .	When there has not been an entry for 6 sec, the lower display alternately shows the conduc- tivity and tempera- ture value.

\* Factory setting

Display	Action	Remark
	<p>The determined cell factor and zero point are displayed. Confirm cell factor with <b>enter</b>.</p>	
	<p>Clean sensor and re-place it in the process. The transmitter now displays the conductivity and temperature.</p> <p>The measured value is shown in the main display alternately with "Hold"; "enter" flashes. Press <b>enter</b> to end calibration.</p>	<p>Safety prompt After end of calibration, the outputs remain in Hold mode for approx. 20 sec.</p>

# Product calibration

## Calibration by sampling

The measurement process is only interrupted briefly.

During product calibration the sensor remains in the process.

Calibration is without TC correction!

Procedure: During sampling the currently measured value is stored in the transmitter. The transmitter immediately returns to measuring mode. The calibration mode indicator flashes and reminds you that calibration has not been terminated. The sample is measured in the lab or directly on the site using a portable meter. The measured sample value is then entered in the transmitter. The new cell factor is calculated from these two values.

If the sample is invalid, you can take over the value stored during sampling. In that case the old calibration values are stored. Afterwards, you can start a new product calibration.

Display	Action	Remark
	<u>Product calibration step 1:</u> Press <b>cal</b> key. Enter passcode 1105*. (Press <b>►</b> key to select position, enter number using <b>▲</b> key, confirm with <b>enter</b> )	If an invalid passcode is entered, transmitter returns to measuring mode.
		Display (approx. 3 sec)
	Take sample and store value. Proceed with <b>enter</b>	The sample is measured in the lab or directly on the site.

\* Factory setting

Display	Action	Remark
	Measuring mode: From the flashing CAL mode indicator you see that product calibration has not been terminated.	While the sample value is determined, the transmitter returns to measuring mode.
	<u>Product calibration step 2:</u> When the sample value has been determined, call up the product calibration once more (Press <b>cal</b> key. Enter passcode 1105*).	Display (approx. 3 sec)
	Enter lab value. The new cell factor is calculated.	
	The new cell factor and zero point are displayed. Confirm with <b>enter</b> .	New calibration: Press <b>cal</b> .
	The measured value is shown in the main display alternately with "Hold"; "enter" flashes. End with <b>enter</b> .	Safety prompt. After end of calibration, the outputs remain in Hold mode for approx. 20 sec.

\* Factory setting

# Zero calibration in air

Display	Action	Remark
	Press <b>cal</b> key, enter code 1001* Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>enter</b>	Transmitter is in Hold mode. If an invalid code is entered, the trans- mitter returns to measuring mode.
	Ready for calibration  Dismount and clean sensor. (Sensor must be dry!)	Display (3 sec)
	Modify the zero point until zero is displayed as conductivity value in the lower display.  Select with <b>▶</b> key, edit number with <b>▲</b> key.  If required, change the sign of the zero point.  Press <b>enter</b> to confirm the zero point.	When there has not been an entry for 6 sec, the lower display alternately shows the conductiv- ity and temperature value.
		

\* Factory setting

Display	Action	Remark
	<p>The cell factor and zero point are displayed. Press <b>enter</b> to confirm the calibration data.</p> <p>Place sensor in process.</p>	
	<p>The measured value is shown in the main display alternately with "Hold"; "enter" flashes. End calibration with <b>enter</b>.</p>	<p>Security prompt. After end of calibration, the outputs remain in Hold mode for approx. 20 sec.</p>

# Zero calibration with calibration solution

Calibration solution with low conductivity

Display	Action	Remark
	Press <b>cal</b> key, enter code 1001* Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>enter</b> .	Transmitter is in Hold mode. If an invalid code is entered, the trans- mitter returns to measuring mode.
	Ready for calibration  Dismount and clean sensor	Display (3 sec)
	Immerse sensor in calibration solution. Modify the value until the lower display shows the conductivity value of the calibration solution. Press <b>enter</b> to confirm calibra- tion.	When there has not been an entry for 6 sec, the lower display alternately shows the conductiv- ity and temperature value.
	The cell factor and zero point are displayed.  Press <b>enter</b> to confirm the cali- bration data.	

\* Factory setting

Display	Action	Remark
	<p>Conductivity and temperature are displayed. Remove the sensor from the calibration solution and clean it. Place sensor in process.</p>	
	<p>The measured value is shown in the main display alternately with "Hold"; "enter" flashes. End calibration with <b>enter</b>.</p>	<p>Security prompt. After end of calibration, the outputs remain in Hold mode for approx. 20 sec.</p>

# Temperature probe adjustment

Display	Action	Remark
	Activate calibration (Press <b>cal</b> , Enter passcode 1015*.) Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>enter</b> .	Wrong settings change the measurement properties! If an invalid passcode is entered, the transmitter returns to measuring mode.
	Ready for calibration	Transmitter is in Hold mode. Display for approx. 3 sec
	Measure the temperature of the process medium using an external thermometer. Enter measured temperature value: Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>enter</b> . End adjustment with <b>enter</b> . HOLD will be deactivated after 20 sec.	Default: Current value of secondary display.

## Measurement

Display	Remark
	In the measuring mode the main display shows the configured process variable (conductivity, concentration, resistivity, or salinity) and the lower display the tempera- ture. During calibration you can return to measuring mode by pressing the <b>cal</b> key, during configuration by pressing <b>conf + enter</b> (waiting time for measured- value stabilization approx. 20 sec).

\* Factory setting

Entry/ Display	Remark
 	<b>Display of the output current</b> Press <b>enter</b> while in measuring mode. For 5 sec, the secondary display shows the output current instead of the temperature.
 0000* 	<b>Display of calibration data (Cal Info)</b> Press <b>cal</b> while in measuring mode and enter passcode 0000*. The current cell factor is shown in the main display and the zero point underneath. After 20 sec the transmitter returns to measuring mode (immediate return at pressing <b>enter</b> ).
 2222*  	<b>Sensor monitor for validation</b> of sensor and complete measured-value processing. Loop a defined sensing resistor (e.g. $R = 100 \Omega$ ) through the sensor as shown in the figure. Press the <b>conf</b> key and enter code 2222*. The sensor monitor displays the directly measured resistance and the temperature. If there is a significant difference between resistor value and display, the sensor and its transmission behavior should be checked. Press <b>enter</b> to return to measurement. <b>Note:</b> The transmitter does not automatically go to Hold mode.
 0000* 	<b>Display of last error message (Error Info)</b> Press <b>conf</b> while in measuring mode and enter passcode 0000*. The last error message is displayed for approx. 20 sec. After that the message will be deleted. (immediate return to measurement at pressing <b>enter</b> ).

\* Factory setting

# Diagnostics functions

Entry/ Display	Action / Remarks
  	<b>Specify output current</b> for testing the connected peripherals Press <b>conf</b> while in measuring mode and enter pass-code 5555*. The output current indicated in the main display can be modified. Select with <b>▶</b> key, edit number with <b>▲</b> key, proceed with <b>enter</b> . The actually measured current is shown in the secondary display. The transmitter is in Hold mode. Press <b>conf</b> , then <b>enter</b> to return to measurement (Hold remains active for another 20 sec).

\* Factory setting

## Cleaning

To remove dust, dirt and spots, the external surfaces of the device may be wiped with a damp, lint-free cloth. A mild household cleaner may also be used if necessary.

Operating state	Out	LED	Time out
Measurement	■	■	
Cal Info <b>(cal)</b> 0000*	■	■	20 sec
Error Info <b>(conf)</b> 0000*	■	■	20 sec

## Error messages (Error Codes)

Error	Display	Problem Possible causes	Red LED	Out 1 (22 mA)
<b>ERR 01</b>	Measured value flashes	<b>Sensor</b> <ul style="list-style-type: none"><li>• Measurement range violation</li><li>• SAL &gt; 45 %</li><li>• Sensor connection or cable defective</li><li>• Wrong cell factor</li></ul>	x	x
<b>ERR 02</b>	Measured value flashes	<b>Unsuitable sensor</b> Conductance range > 3000 mS	x	x
<b>ERR 98</b>	"Conf" flashes	<b>System error</b> Configuration or calibration data defective. Completely reconfigure and recalibrate the device. Memory error in device program	x	x
<b>ERR 99</b>	"FAIL" flashes	<b>Factory settings</b> EEPROM or RAM defective This error message only occurs in the case of a total defect. The transmitter must be repaired and recalibrated at the factory.	x	x
<b>ERR 03</b>		<b>Temperature probe</b> Open or short circuit Temperature range exceeded	x	x

Error	Icon (flashes)	Problem Possible causes	Red LED	Out 1 (22 mA)
<b>ERR 11</b>		<b>Current output</b> Current below 3.8 mA	x	x
<b>ERR 12</b>		<b>Current output</b> Current above 20.5 mA	x	x
<b>ERR 13</b>		<b>Current output</b> Current span too small / too large	x	x
<b>ERR 33</b>		<b>Sensocheck:</b> Primary coil	x	x
<b>ERR 34</b>		<b>Sensocheck:</b> Secondary coil	Sensoface active (see Pg 77)	Sensoface active (see Pg 77)
		Temperature outside TC tables (TC, Conc, SAL)		

## Display of last error message

Entry/ Display	Action / Remarks
0000* 	<b>Display of last error message (Error Info)</b> Press <b>conf</b> while in measuring mode and confirm code 0000*. The last error message is displayed for approx. 20 sec. After that the message will be deleted (immediate return to measurement at pressing <b>enter</b> ).

\* Factory setting

## **Sensoface**

(Sensocheck must have been activated during configuration.)

The smiley in the display (Sensoface) alerts to sensor problems (defective sensor, defective cable). The conditions for a friendly, neutral, or sad Sensoface are summarized in the following chart. Additional icons refer to the error cause.

### **Sensocheck**

Continuously monitors the primary coil and its lines for short circuits and the secondary coil and its lines for open circuits. Critical values make the Sensoface "sad" and the corresponding icon flashes:

The Sensocheck message is also output as error message Err 33 or Err 34. The red LED is lighted, the output current is set to 22 mA (when configured correspondingly). Sensocheck can be switched off during configuration (then Sensoface is also disabled). Exception: After a calibration a Smiley is always displayed for confirmation.

#### **Note:**

The worsening of a Sensoface criterion leads to the devaluation of the Sensoface indicator (Smiley becomes "sad").

To reset the Sensoface indicator, the defect must be remedied and the transmitter be calibrated.

Display	Problem	Status
	Sensor defect	 Short circuit in primary coil Open circuit in secondary coil (see also Error messages Err 33 and Err 34, Pg 75).
 	Temperature error	 Temperature outside range for TC, conc, SAL (independent of Sensoface)

## **Sensors**

Mettler-Toledo GmbH, Process Analytics offers a wide range of electrodeless sensors for the following fields of applications:

- Chemical process industry
- Pharmaceutical industry
- Food and beverage industry
- Pulp and paper industry
- Water/waste-water treatment

For more information concerning our sensors and housings program, please refer to our website:

# Concentration measurement

## Measurement ranges

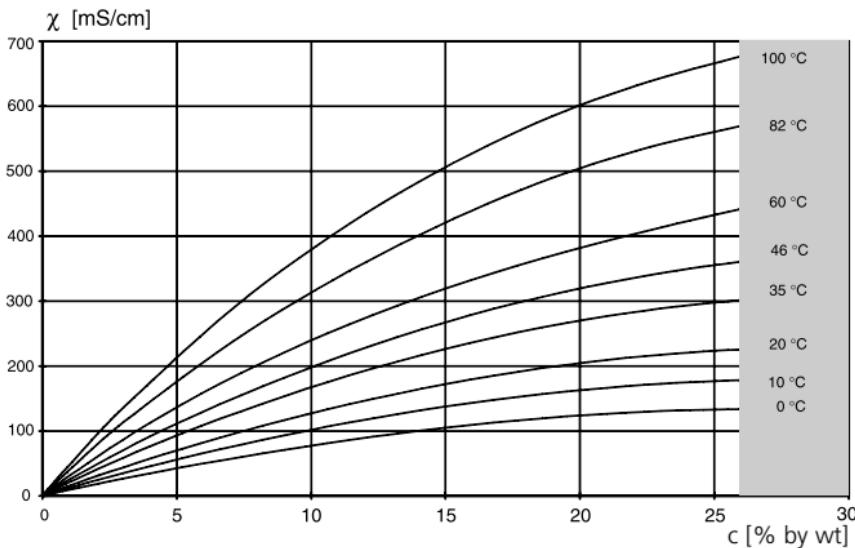

Substance	Concentration ranges		
NaCl Configuration	0-26 % by wt (0 °C) 0-28 % by wt (100 °C) <b>-01-</b>		
HCl Configuration	0-18 % by wt (-20 °C) 0-18 % by wt (50 °C) <b>-02-</b>	22-39 % by wt (-20 °C) 22-39 % by wt (50 °C) <b>-07-</b>	
NaOH Configuration	0-13 % by wt (0 °C) 0-24 % by wt (100 °C) <b>-03-</b>	15-50 % by wt (0 °C) 35-50 % by wt (100 °C) <b>-10-</b>	
H <sub>2</sub> SO <sub>4</sub> Configuration	0-26 % by wt (-17 °C) 0-37 % by wt (110°C) <b>-04-</b>	28-88 % by wt (-17 °C) 39-88 % by wt (115°C) <b>-09-</b>	94-99 % by wt (-17 °C) 89-99 % by wt (115 °C) <b>-06-</b>
HNO <sub>3</sub> Configuration	0-30 % by wt (-20 °C) 0-30 % by wt (50 °C) <b>-05-</b>	35-96 % by wt (-20 °C) 35-96 % by wt (50 °C) <b>-08-</b>	

For the solutions listed above, the transmitter can determine the substance concentration from the measured conductivity and temperature values in % by wt. The measurement error is made up of the sum of measurements errors during conductivity and temperature measurement and the accuracy of the concentration curves stored in the transmitter.

We recommend to calibrate the transmitter together with the sensor. For exact temperature measurement, you should perform a temperature probe adjustment. For measuring processes with rapid temperature changes, a separate temperature probe with fast response should be used.

Werke für Verarbeitung der Rohstoffe, Verarbeitung und Handel  
hierfür nicht geeignet. Soweit nicht ausdrücklich angegeben

**NOTES :**

- 1:  $V_{max}, U_i > V_{oc}, V_t$ , or  $U_0$        $I_{max}, I_i > I_{sc}, I_t$ , or  $I_0$        $P_{max} > P_0$   
 $C_1 + C_{cable} < C_a$  or  $C_0$        $L_1 + L_{cable} < L_a$  or  $L_0$
- 2: Installation must be in accordance with the National Electrical Code (ANSI/NFPA 70) and ANSI/ISA RP12.6 in US, Canadian Electric Code (Can3-M4.21) in Canada.
- 3: Associated apparatus must be FMRC and CSA Approved and must be used in an FMRC and CSA Approved configuration. Use of the Rosemount Model 275 Communicator Zones is not an FMRC Approved configuration. The control drawing for the associated apparatus must be followed when installing this equipment.
- 4: Control equipment connected to the associated apparatus must not use or generate more than 250 V.
- 5: The intrinsically safe equipment connecting to 1, 2, 3, 4, 5, 6 and 7, 8 must be FMRC and CSA Approved or be simple apparatus [a device which will neither generate nor store more than 1.2 V, 0.1 A, 25 mW or 20 mJ].
- 6: No revisions to drawing without prior FMRC and CSA Approval.
- 7: Use of the Rosemount Model 275 Communicator is FM Approved for Division use only, see note 3. When using the Rosemount Model 275 Communicator in the loop between the associated apparatus and the Stratos 2211X Condl 2-Wire Transmitter, the maximum loop inductance must be less than the marked  $L_a$  of the associated apparatus to account for the  $I_{sc}$  from the Model 275 Communicator. Refer to the Rosemount Installation Drawing 00275-0081 to determine the allowable loop inductance.
- 8: The Rosemount Model 275 Communicator is not approved by CSA for use in the entity concept. For CSA application the Rosemount Model 275 Communicator must only be used on the non-hazardous side of the barrier/transmitter power supply.

## Certificate of Compliance

**Certificate:** 1662790

**Master Contract:** 220331

**Project:** 1662790

**Date Issued:** May 18, 2005

**Issued to:** Mettler-Toledo GmbH  
Im Hackecker 15  
Urdorf, 8902  
SWITZERLAND

**Attention:** Mr. Michael Haas

*The products listed below are eligible to bear the CSA Mark shown*

**Issued by:** K. Atkins

**Authorized by:** Nick Alfano  
Operations Manager

### PRODUCTS

CLASS 2258 04 - PROCESS CONTROL EQUIPMENT - Intrinsically Safe Entity - For Hazardous Locations

Class I, Division 1, Groups A, B, C and D

Ex ib [ia] IIC

Transmitters Models 2100/2XH, 7100/2XH and Models 4100/2XH, input rated 30V, 4-20 mA, intrinsically safe devices provides intrinsically safe outputs to simple apparatus, pH, conductivity and oxygen probes when connected per control drawings 194.120-170, 194.220-190 and 194.320-190, 194.401-120. Maximum Ambient Temperature 55°C, Temperature Code T4.

For all models the input entity parameters are:

Terminals	Ui, Vmax	Ii, Imax	Pi, Pmax	Ci	Li
10, 11 or 14.15	30V	100mA	0.8W	32.4nF	0.24mH

Output entity parameters are:

2100/2XH

**Warnings and notes to ensure safe operation**

**Warning:** Do not disconnect equipment unless power has been switched off.

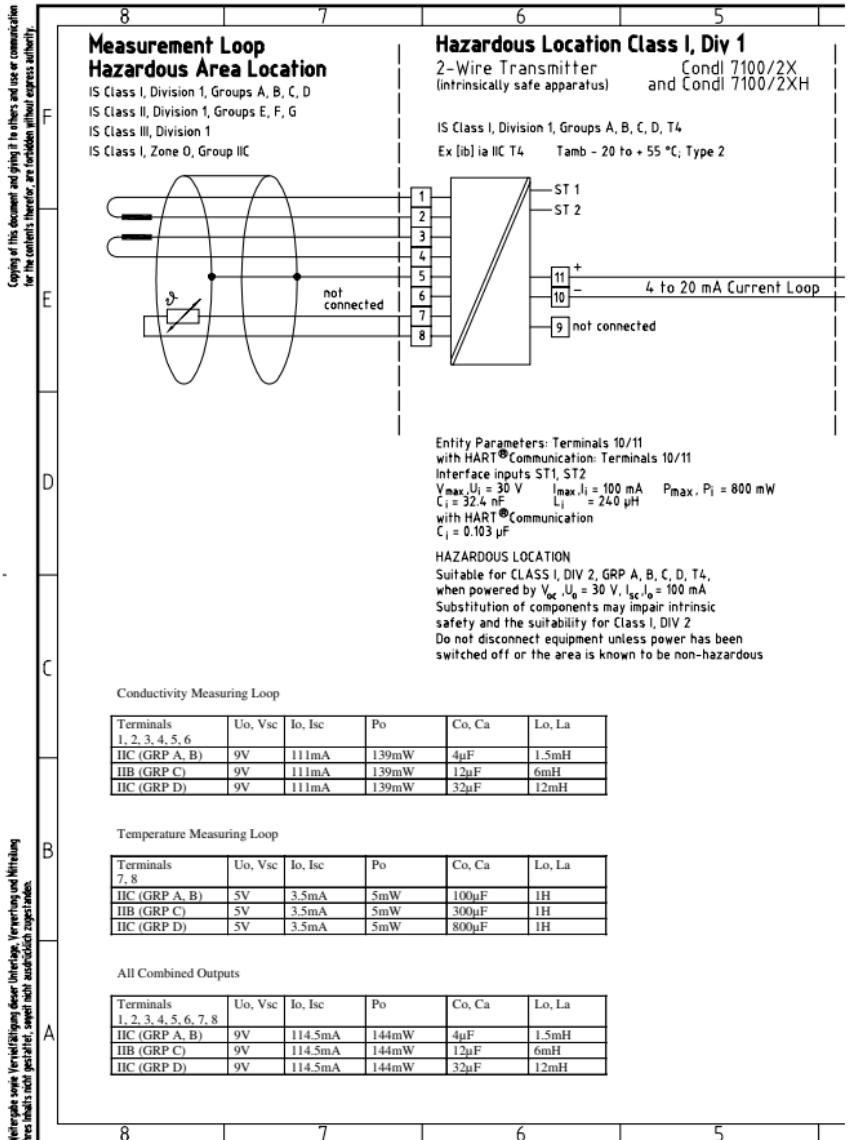

**Warning:** Clean only with antistatic moistened cloth.

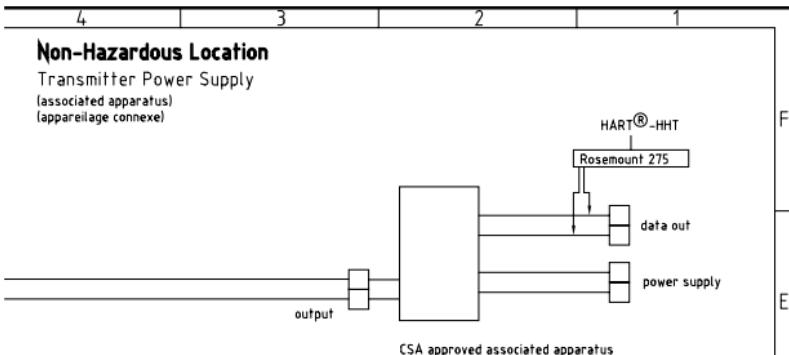

**Warning:** Substitution of components may impair suitability for hazardous locations.

- The equipment shall be installed and protected from mechanical impact and ultraviolet (UV) sources.
- Clean only with a moistened antistatic cloth as potential electrostatic hazard may exist. Service equipment only with conductive clothing, footwear and personal grounding devices to prevent electrostatic accumulation.
- Internal grounding provisions shall be provided for field wiring. Bonding between conduit shall be provided during installation, and all exposed non-current carrying metallic parts shall be bonded and grounded.
- Installation in a Class I, Division 2 or Class I, Zone 2 hazardous location shall be in accordance with the Canadian Electrical Code (CEC Part 1) Section 18 Division 2 wiring methods.

**OBSERVE THE SPECIFICATIONS OF THE CONTROL DRAWING!**

# CSA Control Drawing

**NOTES :**

1:  $V_{max}, U_i > V_{oc}, U_o$        $I_{max}, I_i > I_{sc}, I_o$        $P_{max}, P_i > P_o$   
 $C_i + C_{cable} < C_a \text{ or } C_o$        $L_i + L_{cable} < L_a \text{ or } L_o$

2: Installation must be in accordance with the Canadian Electric Code - Part 1

3: Associated apparatus must be CSA Approved and must be used in an CSA Approved configuration.

The control drawing for the associated apparatus must be followed when installing this equipment.

4: Control equipment connected to the associated apparatus must not use or generate more than 250 V.

5: The intrinsically safe equipment connecting to 1, 2, 3, 4, 5, 6 and 7, 8 must be CSA Approved or be simple apparatus (a device which will neither generate nor store more than 1.2 V, 0.1 A, 25 mW or 20 mJ).

6: No revisions to drawing without prior CSA Approval.

7: The Rosemount Model 275 Communicator must only be used on the non-hazardous side of the barrier/transmitter power supply
