METTLER TOLEDO

UC Evo Line

Good. Better. And maybe even perfect!

METTLER TOLEDO's UC Line is one of the most successful families of touch-screen balances on the global market. Taking good features to the next level – and even honing them to perfection – is what our engineers and designers were striving for when developing and designing the UC Evo Line.

The range features state-of-the-art design, improved ergonomics, as well as maximum user-friendliness and performance to help you optimize your fresh food sales processes. It represents a new chapter in the UC success story.

The UC Evo Line is being launched in three performance classes and with an increased range of housing variants. Whether you're part of a large retail chain or an independent local store, there's a balance for everyone.

Better advisory skills

UC Evo Line means better operation and service. Discover the wide range of effective tools that it offers to help your sales team communicate with customers.

Focused advertising

Create incentives to buy and generate additional sales by showing visual sales promotions and cross-selling campaigns on your balance's vivid customer display. UC Evo Line – a new addition to the sales team at your fresh food counter.

„Design reflects function –
it’s not simply a question of taste.“

Flexible. Customer-focused.

An ergonomic way to achieve sales

Achieving success in sales is a question of perspective. With UC Evo Line, you can adjust the individual touchscreen operating panels and customer displays on your balances to suit your particular counter and sales requirements – easily and precisely.

Looking for a product that offers quick operation without the risk of fatigue? And provides customers with a perfect view of all promotional clips, product information, and weighing information while ensuring optimum legibility? Then look no further than the Flexible Scale Display System (FSDS) for the UC Evo Line range, which gives you the freedom to create an ergonomic workplace and tailor the equipment to your customers' requirements – in the blink of an eye.

Adapt the angle and height of the customer display to your individual sales area. In this way, the FSDS enables you to present customers with a consistent image – even if you have a mixture of balances with and without cash register drawers. Differences in height can be evened out effortlessly.

Design and ergonomics working in perfect harmony within a compact, space-saving unit – that's what makes this line so unique.

Flawless customer service

Slightly higher or slightly lower? Slightly more angled or slightly flatter? Thanks to the FSDS, you can avoid creating barriers when communicating with customers. Adjust the customer displays to suit the requirements of your store and keep communication between customers and employees flowing.

„Design that’s bound to impress –
with perfect attention to detail.“

Perfect legibility

Thanks to their excellent brightness and contrast values, the customer display and touchscreen operating panel are bound to impress. All balances feature color displays with LED backlight technology as standard. The result is almost 20% more contrast compared to the UC Line range as well as improved legibility under unfavorable lighting conditions and from awkward angles.

Ergonomic touchscreen operating panel

With the FSDS, your employees can adjust the angle of their touchscreen operating panels precisely to suit their individual ergonomic requirements. This is the key to avoiding fatigue and enabling faster operation without errors – even when things get hectic.

Simple maintenance

UC Evo Line has no unnecessary gaps or edges where dirt could accumulate. Die-cast and glass surfaces that are both hard-wearing and easy to clean make it easier for you to maintain perfect standards of hygiene.

Versatile. Sustainable concept.

Equipment and model variants

UC Evo Line stands for state-of-the-art weighing technology that offers excellent performance and is based on sustainability. Thanks to the extensive range of equipment and model variants available, you're bound to find a weighing solution that's precisely suited to your requirements – whether you need it for pre-packing, the service counter, or self-service weighing.

This wide range of options will also help you find the perfect solution for integrating weighing technology into your particular sales area. And with UC Evo Line, you're also on track to achieve your sustainability

targets – thanks to its intelligent energy-saving modes, improved energy efficiency, and environmentally-sound device materials, as well as environmentally-friendly and effective service facilities for

remote maintenance and remote diagnostics. Choose UC Evo Line and discover how sustainability can lower your costs and increase customer confidence.

Energy-saving. Hygienic.

All UC Evo Line balances operate without fans. Waste heat is dissipated via the aluminum housing. Benefit from a hygienic choice: There are no louvers to accumulate dust and there is no fan-generated swirl to interfere with your fresh produce.

Better energy efficiency

More contrast, more brightness, more vividness – with lower power consumption: Thanks to the latest LED technology and greater energy efficiency, the UC Evo Line touchscreen operating panels and customer displays are bound to impress. All of the balances feature energy-saving modes that can be configured using software.

Various display options

Whether you need a larger customer display for visual merchandising or a tower display for compact balances on the sales counter, you can tailor your balances precisely to your needs with our external color TFT displays (5.7-inch and 12.1-inch versions) or our tower display options.

„Good design is built on sustainability –
it thinks about the environment.“

New color versions

The UC Evo Line has the right counter scales for you in a Silver and Black Line housing – with a large, 12.1-inch color display for visual sales promotion or as a standard version with a small customer screen for providing pricing and weighing information.
